Specifications Guide
Global Freight

Latest update: July 2026

Definitions of the trading locations for which Platts publishes daily indexes or assessments **2**

Oil tanker & barge freight 28
Platts Base Rates 36
Carbon-inclusive Base Rates and EUA Charges 38
LPG freight 39
Dry bulk freight 41
Iron ore 42
Thermal coal 44
Metallurgical coal petcoke and scrap 47
Alumina and bauxite 48
Sugar and grains 50
Limestone 51
Cement and Supplementary Cementitious Materials (SCMs) 52
Dry bulk Time Charter Equivalents (TCEs) 59
Global Dry Index 62
Atlantic Period Rates 63
Carbon-Inclusive Dry Bulk Freight & Carbon Emission Charges 64
Box Rates, Platts Bunker Charges and Platts Carbon Emissions Charges 67
Platts Bunker Charges 70
Platts Bunker Excluded (PBX) container spot rate 73
Platts Carbon Emissions Charges 74
Chemical freight 79
Fertilizer Freight 82
Ammonia 83

Revision history **85**

Definitions of the trading locations for which Platts publishes daily indexes or assessments

The following specifications guide contains the primary specifications for S&P Global Energy's Platts global freight assessments. All the assessments listed here employ Platts Assessments Methodology, as published at https://www.spglobal.com/commodityinsights/plattscontent/_assets/_files/en/our-methodology/methodology-specifications/platts-assessments-methodology-guide.pdf. These guides are designed to give Platts subscribers as much information as possible about a wide range of methodology and specification questions.

This guide is current at the time of publication. Platts may issue further updates and enhancements to this guide and will announce these to subscribers through its usual publications of record. Such updates will be included in the next version of this guide. Platts editorial staff and managers are available to provide guidance when assessment issues require clarification.

Oil tanker & barge freight

Platts tanker and barge freight assessments reflect the transactable value of chartering a vessel at the following times:

Singapore 16:30 – East of Suez Tankers (Clean and Dirty)

London 16:30 – West of Suez EMEA Tankers & Barges (Clean and Dirty)

Houston 13:30 – West of Suez Americas Tankers (Clean and Dirty)

Tanker assessments

Dirty tankers are defined as those carrying crude, fuel oil or other "dirty" petroleum products such as vacuum gasoil or dirty condensate. Platts also publishes separate assessments for smaller dirty tankers and barges dedicated to moving just fuel oil. Clean tankers and barges carry light ends such as gasoline or naphtha, or middle distillates such as gasoil and jet fuel.

Location: Platts assesses a number of key shipping regions under broad geographic descriptions. A list of those descriptions, and the markets they represent, are as follows:

UK Continent: All ports west of Gibraltar to Hamburg, plus southern Sweden and western Norway. Platts typically views the Oresund Bridge, joining Denmark and Sweden, as the eastern extent of this range.

Mediterranean: All ports from Gibraltar to Istanbul

Baltic: All ports in Russia (Baltic), Latvia, Estonia, Lithuania, Finland (Baltic), Sweden (Baltic), Germany (Baltic) and Poland

Black Sea: All ports in the Black Sea

Caribbean: Venezuela, Atlantic Colombia, the islands in the Caribbean Sea and Guyana

Guyana: All ports in Guyana

West Coast Central America: All ports from Costa Rica to Guatemala on the Pacific side of the Americas

East Coast Canada: Atlantic coast, including the Gulf of St Lawrence

West Coast Canada: All ports in the Canadian West Pacific

US West Coast: Seattle to Los Angeles

US Gulf Coast: Pascagoula, Mississippi to Corpus Christi, Texas

US Atlantic Coast: Florida to Portland, Maine

Persian Gulf: All ports in the Persian Gulf (also known as the Arab Gulf), up to and including the Gulf of Oman

Indonesia: All ports in Indonesia

South Korea: All ports in South Korea

Japan: All ports in Japan

China: All ports in China

East Coast Australia: All ports in East Coast Australia

West Coast Australia: All ports in West Coast Australia

South Coast Australia: All ports in South Coast Australia

North Coast Australia: All ports in North Coast Australia

Red Sea: All ports in the Red Sea

East Coast India: All East Coast India ports

West Coast India: All West Coast India ports

Tanker sizes & laycans

Vessel class	Typical size (dwt)	Laycans assessed (days forward)
East of Suez		
Handysize/MR	25,000-55,000	7-15
LR1	55,000-80,000	7-15
LR2	80,000-120,000	7-21
Aframax	80,000-120,000	10-20
Suezmax	120,000-200,000	10-20
VLCC	160,000-320,000	10-25
West of Suez - EMEA		
Intermediate	10,000-25,000	5-15
Handy-size/MR*	25,000-55,000	5-15
MR**	25,000-55,000	7-25
LR1	55,000-80,000	7-25
LR2	80,000-120,000	7-25
Panamax	50,000-80,000	7-25
Aframax	80,000-120,000	7-25
Suezmax	120,000-200,000	10-30
VLCC	160,000-320,000	10-35
West of Suez - Americas		
MR	25,000-55,000	3-10
LR1	55,000-80,000	7-20
Panamax	50,000-80,000	5-20
Aframax	80,000-120,000	5-20
Aframax Lightering***	500,000 barrels	7-10
Suezmax	120,000-200,000	7-25
VLCC	160,000-320,000	15-45

*For a European voyage.

**For voyages from Europe to anywhere else in the world.

***For three-day turnaround with $/day overtime charged for additonal time

East Africa: From the Horn of Africa to Mozambique

West Africa: From Ghana to Namibia

South Africa: All ports in South Africa

Size and specifications: The tonnage specified in the Platts assessment tables represents the weight of the cargo carried. Platts may normalize freight rates for charters of a different size for assessment purposes, including pro-rating the market rate to the size of the cargo reflected in the assessment.

© 2026 by S&P Global Inc. All rights reserved.

Tanker assessments are based on double-hull vessels up to 15 years of age. Where there is a broadly equal amount of market activity taking place for both well-approved, modern tonnage and older, less approved tonnage in the same market concurrently, Platts assessments will be based on the higher-end quality of the market. The aim is to reflect where the bulk of spot market activity is taking place in each of the routes Platts assesses.

Timing: Platts assesses different laycan date ranges according to prevailing regional market practice. Platts reflects fixtures that fall within the typical date ranges in its assessments. Fixtures reported for dates outside of these typical ranges may be normalized to the assessed laycans for assessment purposes.

Tanker freight is commonly traded in the spot market as a percentage of Worldscale flat rates or as a lumpsum rate. Platts also publishes the equivalent US dollars per metric ton rate for all tanker routes assessed, except for the US Gulf Coast Aframax lumpsum lightering and overtime assessments as well as demurrage assessments across VLCC, Suezmax, Aframax and Medium Range (MR) tanker segments. The lumpsum lightering and overtime assessments are basis 500,000 barrels. Platts assessments for four Medium Range tanker voyages from Arab Gulf-East Africa, Arab Gulf-South Africa, Red Sea-East Africa and West Coast India-South Africa are on an all-inclusive basis that incorporates security costs. Platts assesses its Baltic-UKC 100kt dirty tanker freight assessment at a fixed Worldscale premium of 50 points to its 100kt Baltic-Mediterranean assessment published under the code DBLMA00.

Worldscale assessments: In markets where freight is traded on a Worldscale basis, Platts publishes freight assessments in points, which reflect a percentage of the prevailing Worldscale annual flat rate.

For example, if the Worldscale annual flat rate – also known as Worldscale 100 – is set at $10.00 per metric ton for a specific voyage, a Platts assessment of 50 points for that voyage would mean that the class of ship being assessed is being chartered for $5.00 per metric ton of freight on that voyage.

From time to time, the Worldscale Association publishes revisions to these flat rates in its circulars. Platts reviews these changes with the industry for possible inclusion into Platts freight calculations. Platts will update the market of any such changes through published subscriber notes.

Platts determines the equivalent $/mt freight rate based on a basket of Worldscale flat rates comprising several key routes between the two regions specified in the assessment. For example, the UKC-USGC $/mt assessment for chartering a MR is based on a basket of the following routes: Bilbao-Houston, Amsterdam-Houston and Antwerp-Houston. Platts spot Worldscale assessments are applied to this basket to produce the $/mt assessment. The rates are updated annually, when the Worldscale Association establishes new flat rates for the year. The full suite of assessments assessed by Platts on Worldscale basis along with the basket of routes considered to calculate average $/mt flat rate is available here:

https://www.spglobal.com/content/dam/spglobal/ci/en/documents/platts/downloads/global-freight-assessment-basket-routes.xlsx

Lumpsum assessments: In some tanker markets, freight is traded and assessed on a US dollar lumpsum basis, reflecting the total cost of chartering a ship of a specified size on a particular voyage. Lumpsum trades typically include harbor dues, port costs and other transportation costs. For routes which are assessed on a lumpsum basis, the $/mt assessment is calculated by dividing the lumpsum total by the size of the cargo assessed. In the Americas, USGC-loading VLCC freight assessments are assessed on a reverse lightering basis, excluding port costs and lightering charges.

Replacements: Assessments are based on original vessel fixtures. In the event that a fixture fails and a replacement ship is subsequently fixed, the replacement rate may be normalized to the assessed laycan.

Canals: Assessments for voyages which would involve a canal transit, including the Suez Canal and the Panama Canal, include canal fees. Voyages through the Panama Canal also include the Panama Canal Authority's freshwater surcharge.

Singapore demurrage: Dirty Demurrage FOB Singapore assessment reflects the daily lumpsum demurrage rate of dirty Aframax tankers, typically loading an 80,000 mt cargo seven to 15 days forward.

Clean Demurrage FOB Singapore assessment reflects the daily lumpsum demurrage rate of clean Medium Range tankers, typically loading a 30,000 mt cargo seven to 15 days forward.

Black Sea demurrage: The Turkish Straits demurrage assessment reflects the daily lump-sum demurrage rate of dirty Aframax tankers, typically loading an 80,000 mt cargo seven to 25 days forward. Platts also assesses a daily lumpsum demurrage rate of dirty Suezmax tankers, typically loading a 135,000 mt cargo 10 to 30 days forward.

North Sea demurrage: The North Sea demurrage assessment reflects the daily lumpsum demurrage rate of dirty Aframax tankers, typically loading an 80,000 mt cargo seven to 25 days forward.

Mediterranean demurrage: The Mediterranean demurrage assessment reflects the daily lumpsum demurrage rate of dirty Aframax tankers, typically loading an 80,000 mt cargo seven to 25 days forward.

Americas demurrage: The VLCC USGC-China assessment reflects the daily lumpsum demurrage for a VLCC typically loading 270,000 mt cargo 15 to 45 days forward.

© 2026 by S&P Global Inc. All rights reserved.

The VLCC Brazil-China assessment reflects the daily lumpsum demurrage for a VLCC typically loading 260,000 mt cargo 15 to 45 days forward.

The USGC Suezmax assessment reflects the daily lumpsum demurrage for a Suezmax typically loading 130,000 mt – 145,000 mt cargo seven to 25 days forward.

The USGC Aframax assessment reflects the daily lumpsum demurrage for an Aframax typically loading 70,000 mt cargo five to 20 days forward.

The USGC Clean MR assessment reflects the daily lumpsum demurrage rate for Medium Range clean tankers loading 38,000 mt cargo on the US Gulf Coast three to 10 days forward.

Turkish Straits delays: The Turkish Straits delays assessment reflects the waiting time for vessels over 200m LOA passing the Bosporus and Dardanelles straits northbound and southbound.

ECA charges: The additional costs of complying with ECA regulations are included within the Worldscale flat rates. These costs are calculated by Worldscale using a breakdown of voyage distances within and outside the ECA.

IMO 2020: The additional costs associated with the International Maritime Organization's move to lower sulfur fuel standards are included within the Worldscale flat rates. Lower costs associated with using higher sulfur fuel are not incorporated within the Platts Worldscale assessments.

Tanker Time Charter Equivalents (TCEs)

Platts publishes daily spot market Time Charter Equivalents for selected Dirty Tanker Aframax, Suezmax and VLCC routes. Platts also publishes daily spot market Time Charter Equivalents for selected Clean Tanker Long Range 2, Long Range 1 and Medium Range routes. Each TCE assessment reflects the $/day pricing derived from the respective $/mt rates published by Platts.

TCEs are calculated using bunker prices published by Platts.

Platts assesses TCEs for scrubber-fitted and non-scrubber ships and provides an additional breakdown for each of these assessments based on daily bunker costs. Certain Aframax TCEs, as highlighted in the table above, use bunker costs from one week prior, and bunker costs from two weeks prior to reflect the bunker overhang in tanks.

The port charges, vessel speed and consumption used in the TCE calculations are arrived at by extensive market survey and reflect market practices.

Global Dirty Tanker Index

Platts publishes the Global Dirty Tanker Index, a combined wet bulk freight industry marker, that is derived from the weighted average time charter equivalent (TCE) indices including the Platts Global VLCC Index (GVI 7 and GVI 7S), the Global Suezmax Index (GSI 10 and GSI 10S) and the Global Aframax Index (GAFXI 10 and GAFXI 10S).

The Platts Dirty Tanker Index, called DTI, is published in dollars per day ($/day) for both non-eco, non-scrubber vessels and DTIS for eco-class, scrubber-fitted ships following the logic of capturing the market's upper and lower earnings ranges.

The index assessments are not published on days when either London, Houston, or Singapore or all locations have a public holiday.

Weightings for the individual indices within the Platts Global Dirty Tanker Index are determined by the ton-days observed for VLCC, Suezmax, and Aframax tankers globally over the last three full years (2022-2024) from CAS. Ton-days demand is calculated by multiplying the volume of cargo moved in metric tons by the duration of each tracked shipment in days.

Vessel Segment	Weight (%)
VLCC	63
Suezmax	23
Aframax	14

Global VLCC TCE Index

Platts publishes a daily weighted VLCC time charter equivalent (TCE) index, named GVI 7, basis 0.5% sulfur bunker fuel and scrubber-fitted ships along with TCE assessments, reflecting ton-mile demand on seven key TCE assessments.

Effective March 1, 2024, the GVI 7 (basis 0.5% sulfur bunker fuel) and GVI 7S (basis scrubber-fitted) assessments for standard VLCC non-eco and eco-designed ships respectively are derived by applying an allocated weighting to the daily VLCC TCE assessments of seven key round voyages.

The VLCC TCE assessments are:

Ras Tanura -Ningbo
Ras Tanura -Galveston
Ras Tanura -Rotterdam
Offshore Galveston- Ningbo
Gebig -Qingdao
Corpus Christi -Rotterdam
Djeno- Ningbo

Weighting for the individual TCE assessments is determined by the volume of VLCC vessel movements observed between the

© 2026 by S&P Global Inc. All rights reserved.

regions associated with the respective voyages from trade flow software S&P Global Commodities at Sea. It is calculated in ton-miles.

Ton-mile demand is calculated by multiplying the volume of cargo moved in metric tons by distance traveled in miles.

The weightings allocated for the TCE assessments are based on flows observed over Jan. 1, 2020, to Dec. 31, 2022:

Route	Symbol Code (0.5% bunker fuel, Non-Eco)	Symbol Code (3.5% bunker fuel and Eco)	Weighting (%)
Ras Tanura -Ningbo	DRTNA00	DRTMA00	64
Ras Tanura -Galveston	DRTNB00	DRTMB00	2
Ras Tanura -Rotterdam	DRTNC00	DRTMC00	1
Offshore Galveston - Ningbo	DOGNB00	DOGMB00	8
Gebig - Qingdao	GQBLS00	GQBLR00	8
Corpus Christi - Rotterdam	CCRBS00	CCRTS00	1
Djeno - Ningbo	DFRCN00	DFRCM00	16

The GVI 7 TCE indexes are:

Indexes	Daily	Monthly average
GVI 7 Basis bunker fuel 0.5%, Non-Eco	VGIBS00	VGIBS03
GVI 7S Basis scrubber-fitted, Eco	VGIBR00	VGIBR03

Global Suezmax TCE Index

Platts publishes a daily Global Suezmax time charter equivalent (TCE) ton-miles weighted index, designated as GSI 10, based on vessels utilizing 0.5% sulfur bunker fuel, and an additional daily Global Suezmax TCE ton-miles weighted index, designated as GSI 10S, based on scrubber-fitted vessels, utilizing 3.5%S bunker fuel and eco-class design.

The GSI 10 and the GSI 10S are derived by applying an allocated weighting to the daily Suezmax TCE assessments of 10 key round voyages.

The assessment of two series of TCE rates for both non-scrubber, non-eco and scrubber-fitted, eco vessels encapsulates the market's upper and lower earnings thresholds, thus providing enhanced clarity regarding TCE earnings across diverse Suezmax categories.

The GSI 10 and GSI 10S indices are not published on days when any of London, Singapore, Houston, or all three locations are out on a public holiday.

The TCE assessments for the routes Escravos-Fos, Forcados-Rotterdam, Novorossiisk-Trieste, and Novorossiisk-Yosu follow the London schedule and will be published at the 4:30 pm London close.

The TCE assessments for the routes Basrah-Aliaga, Basrah-Galveston, Ras Laffan-Daesan, and Basrah-Rotterdam follow the Singapore schedule and will be published at the 4:30 pm Singapore close.

The TCE assessments for the routes Corpus Christi-Rotterdam and Corpus Christi-Cartagena follow the Houston schedule and will be published at the 1:30 pm Houston close.

The weighting for individual TCE assessments is determined by the volume of Suezmax vessel movements as observed by data from S&P Global Commodities at Sea, converted to ton-miles.

The ton-mile demand estimation is derived from the cargo volume observed during the period 2021-23 between regions in metric tons multiplied by the distance travelled, in nautical miles, for the specified routes above, following the shortest route.

Route	Loading Port	Discharge Port	Weight (%)
West Africa – Mediterranean	Escravos, Nigeria	Fos, France	15
West Africa - UK Continent	Forcados, Nigeria	Rotterdam, Netherlands	14
Black Sea – Mediterranean	Novorossiisk, Russia	Trieste, Italy	4
Black Sea - Far East	Novorossiisk, Russia	Yosu, South Korea	16
Persian Gulf – Mediterranean	Basrah, Iraq	Aliaga, Turkey	17
Persian Gulf - US Gulf Coast	Basrah, Iraq	Galveston, US	8
Persian Gulf - Far East	Ras Laffan, Qatar	Daesan, South Korea	6
Persian Gulf - UK Continent	Basrah, Iraq	Rotterdam, Netherlands	6
US Gulf Coast - UK Continent	Corpus Christi, US	Rotterdam, Netherlands	9
US Gulf Coast – Mediterranean	Corpus Christi, US	Cartagena, Spain	5

Global Aframax TCE Index

Platts publishes a daily Global Aframax time charter equivalent (TCE) ton-miles weighted index, designated as GAFXI 10, based on vessels utilizing 0.5% sulfur bunker fuel, and an additional daily Global Aframax TCE ton-miles weighted index, designated as GAFXI 10S, based on scrubber-fitted vessels, utilizing 3.5%S bunker fuel and eco-class design.

The GAFXI 10 and the GAFXI 10S are derived by applying an allocated weighting to the daily Aframax TCE assessments of 10 key round voyages.

The assessment of two series of TCE rates for both non-scrubber, non-eco and scrubber-fitted, eco vessels encapsulates the market's upper and lower earnings thresholds, thus providing enhanced clarity regarding TCE earnings across diverse Aframax categories.

© 2026 by S&P Global Inc. All rights reserved.

The GAFXI 10 and GAFXI 10S indices are not published on days when any of London, Singapore, Houston, or all three locations are out on a public holiday.

The TCE assessments for the routes Teesport-Rotterdam, Mongstad-Genoa, CPC-Augusta and Ceyhan-Trieste are published at 4:30 pm London timestamp and follow the London publishing schedule.

The assessments for the routes Fujairah-Ulsan, Kimanis-Geelong and Dampier-Daesan are published at the 4:30 pm Singapore time stamp and follow the Singapore publishing schedule.

The assessments for the routes Corpus Christi-Rotterdam, Dos Bocas-Houston and Houston-Canaport are published at 1:30 pm Houston timestamp and follow the Americas publishing schedule.

The weighting for individual TCE assessments is determined by the volume of Aframax vessel movements as observed by data from S&P Global Commodities at Sea, converted to ton-miles.

The ton-mile demand estimation is derived from the cargo volume observed during the period 2022-24 between regions in metric tons multiplied by the distance travelled, in nautical miles, for the specified routes above, following the shortest route.

Route	Loading Port	Discharge Port	Weight (%)
Med-Med	Ceyhan	Trieste	11
Black Sea-Med	CPC	Augusta	9
UKC-Med	Mongstad	Genoa	5
UKC-UKC	Teesport	Rotterdam	6
USGC-UKC	Corpus Christi	Rotterdam	36
Caribbean-USGC	Dos Bocas	Houston	9
USGC-ECNA	Houston	Canaport	3
Middle East Gulf-Far East	Fujairah	Ulsan	8
Southeast Asia-Oceania	Kimanis	Geelong	9
Oceania-Far East	Dampier	Daesan	4

Global Clean Tanker Index

Platts publishes the Global Clean Tanker Index, a combined wet bulk freight industry marker derived from weighted average time charter equivalent indices, namely the Global LR2 Indices (GCTLR2 and GCTLR2SE), the Global LR1 Indices (GCTLR1 and GCTLR1SE) and the Global MR Indices (GCTMR and GCTMRSE).

The Platts Clean Tanker Index is published in dollars per day ($/day) for both non-eco, non-scrubber ships (CTI) and eco-class, scrubber-fitted ships (CTISE), following the logic of capturing the market's upper and lower earning ranges.

The indices are not published on days when either London, Houston, or Singapore or all locations have a public holiday.

The Platts Global Clean Tanker Index weighs the individual indices based on the ton-days observed for LR2, LR1 and MR tankers globally over the period2022-2024 from trade flow software S&P Global Commodities at Sea. Ton-days demand is calculated by multiplying the volume of cargo moved in metric tons by the duration of each tracked shipment in days.

Vessel segment	Weight (%)
LR2	27
LR1	13
MR	60

Global Long Range 2 TCE Index

Platts publishes a daily Global Long Range 2 time charter equivalent (TCE) ton-miles weighted index, designated as GCTLR2, based on vessels utilizing 0.5% sulfur bunker fuel, and an additional daily Global Long Range 2 TCE ton-miles weighted index, designated as GCTLR2SE, based on scrubber-fitted vessels, utilizing 3.5%S bunker fuel and eco-class design.

The GCTLR2 and the GCTLR2SE are derived by applying an allocated weighting to the daily Long Range 2 TCE assessments of three key round voyages.

The assessment of two series of TCE rates for both non-scrubber, non-eco and scrubber-fitted, eco vessels encapsulates the market's upper and lower earnings thresholds, thus providing enhanced clarity regarding TCE earnings across diverse Long Range 2 categories.

The GCTLR2 and GCTLR2SE indices are not published on days when any of London, Singapore or both locations are out on a public holiday.

The TCE assessments for the route Eleusis to Yosu, are published at 4:30 pm London timestamp and follow the London publishing schedule.

The assessments for the routes Ras Tanura to Yokohama and Jubail to Rotterdam, are published at the 4:30 pm Singapore time stamp and follow the Singapore publishing schedule.

The weighting for individual TCE assessments is determined by the volume of Long Range 2 vessel movements as observed by data from S&P Global Commodities at Sea, converted to ton-miles.

The ton-mile demand estimation is derived from the cargo volume observed during the period 2022-24 between regions in metric tons multiplied by the distance travelled, in nautical miles, for the specified routes above, following the shortest route.

Global Long Range 2 tanker routes and weights

Route	Loading port	Discharge port	Weight (%)
MED-FAR EAST	Eleusis	Yosu	5
AG-FAR EAST	Ras Tanura	Yokohama	60
AG-UKC	Jubail	Rotterdam	35

Global Long Range 1 TCE Index

Platts publishes a daily Global Long Range 1 time charter equivalent (TCE) ton-miles weighted index, designated

© 2026 by S&P Global Inc. All rights reserved.

as GCTLR1, based on vessels utilizing 0.5% sulfur bunker fuel, and an additional daily Global Long Range 1 TCE ton-miles weighted index, designated as GCTLR1SE, based on scrubber-fitted vessels, utilizing 3.5%S bunker fuel and eco-class design.

The GCTLR1 and the GCTLR1SE are derived by applying an allocated weighting to the daily Long Range 1 TCE assessments of three key round voyages.

The assessment of two series of TCE rates for both non-scrubber, non-eco and scrubber-fitted, eco vessels encapsulates the market's upper and lower earnings thresholds, thus providing enhanced clarity regarding TCE earnings across diverse Long Range 1 categories.

The GCTLR1 and GCTLR2SE indices are not published on days when any of London, Singapore or both locations are out on a public holiday.

The TCE assessments for the routes Skikda to Chiba and Antwerp to Lagos, are published at 4:30 pm London timestamp and follow the London publishing schedule.

The assessments for the routes Ras Tanura to Yokohama and Jubail to Rotterdam, are published at the 4:30 pm Singapore time stamp and follow the Singapore publishing schedule.

The weighting for individual TCE assessments is determined by the volume of Long Range 1 vessel movements as observed by data from S&P Global Commodities at Sea, converted to ton-miles.

The ton-mile demand estimation is derived from the cargo volume observed during the period 2022-24 between regions in metric tons multiplied by the distance travelled, in nautical miles, for the specified routes above, following the shortest route.

Global Long Range 1 tanker routes and weights

Route	Loading port	Discharge port	Weight (%)
MED-FAR EAST	Skikda	Chiba	5
UKC-WAF	Antwerp	Lagos	21
AG-FAR EAST	Ras Tanura	Yokohama	54
AG-UKC	Jubail	Rotterdam	20

Global Medium Range TCE Index

Platts publishes a daily Global Medium Range time charter equivalent (TCE) ton-miles weighted index, designated as GCTMR, based on vessels utilizing 0.5% sulfur bunker fuel, and an additional daily Global Medium Range TCE ton-miles weighted index, designated as GCTMR, based on scrubber-fitted vessels, utilizing 3.5% bunker fuel and eco-class design.

The GCTMR and the GCTMRSE are derived by applying an allocated weighting to the daily Medium Range TCE assessments of 10 key round voyages.

The assessment of two series of TCE rates for both non-scrubber, non-eco and scrubber-fitted, eco vessels encapsulates the market's upper and lower earnings thresholds, thus providing enhanced clarity regarding TCE earnings across diverse Medium Range categories.

The GCTMR and GCTMRSE indices are not published on days when any of London, Singapore or both locations are out on a public holiday.

The TCE assessments for the routes Antwerp to Lagos, Amsterdam to New York, Amsterdam to Suape and Augusta to New York, are published at 4:30 pm London timestamp and follow the London publishing schedule.

The assessments for the routes Fujairah to Mombasa, Ulsan to Chiba and Ulsan to Singapore and Jubail, are published at the 4:30 pm Singapore time stamp and follow the Singapore publishing schedule.

The assessments for the routes Houston to Pozos, Houston to San Vicente and Houston to Antwerp are published at 1:30 pm Houston timestamp and follow the Americas publishing schedule.

The weighting for individual TCE assessments is determined by the volume of Long Range 1 vessel movements as observed by data from S&P Global Commodities at Sea, converted to ton-miles.

The ton-mile demand estimation is derived from the cargo volume observed during the period 2022-24 between regions in metric tons multiplied by the distance travelled, in nautical miles, for the specified routes above, following the shortest route.

Global Medium Range tanker routes and weights

Route	Loading port	Discharge port	Weight (%)
UKC-WAF	Antwerp	Lagos	8
UKC-USAC	Amsterdam	New York	7
UKC-ECSA	Amsterdam	Suape	2
MED-USAC	Augusta	New York	3
USGC-CARIBS	Houston	Pozos	15

USGC-UKC	Houston	Antwerp	14
AG-EAST AFRICA	Fujairah	Mombasa	5
FAR EAST-FAR EAST	Ulsan	Chiba	14
FAR EAST-SOUTHEAST ASIA	Ulsan	Singapore	17

US Gulf Coast Lightering Assessments

Platts daily US Gulf Coast Aframax lumpsum lightering assessment reflects the cost of a three-day, full-service lightering operation for 500,000-barrel cargoes loading seven to 10 days forward on the USGC, basis the Galveston Offshore Lightering Area (GOLA), offshore Houston. The assessment includes the cost of bunker fuel as well as typical service items for a full-service lightering operation, such as servicing ships, mooring masters, and port costs. However, the assessment excludes costs for wharfage and dockage, as these are typically for the charterer's account.

© 2026 by S&P Global Inc. All rights reserved.

Jones Act Assessments

Platts clean tanker Medium Range Jones Act freight assessments reflect spot-equivalent lumpsum and $/mt freight values based on transactional term charter rates, adding roundtrip bunker and port costs from the USGC to Tampa, West Coast Florida, and to Port Everglades, East Coast Florida.

The spot-equivalent freight assessments factor in:

- Term charter rates on a $/day basis multiplied by the number of roundtrip voyage days
- Voyage distance on a roundtrip basis
- Average load port costs at Houston, Lake Charles, New Orleans and Pascagoula
- Discharge port costs at Tampa and Port Everglades, respectively
- Average delivered 0.1% sulfur marine gas oil bunker costs at the main bunkering ports of Houston and New Orleans as assessed by Platts on a daily basis under the codes AAWWX00 and AAWYA00,respectively
- Voyage speed of 14 knots for both laden and ballast legs at a bunker consumption of 32 mt/d and 30 mt/d, respectively
- Bunker consumption of 5 mt/d for two loading days and 12 hours of idle time per roundtrip, and consumption of 18 mt/d during two days of discharge.

The assessment is assessed weekly, every Wednesday at 1:30 pm Houston close. In the event of a public holiday on Wednesday, the assessment is published one working day prior.

Carbon Emission Charge Tanker Assessments

Platts includes the European Union's Emissions Trading System carbon costs in all its global clean and dirty tanker freight assessments that involve at least one EU port, to reflect prevailing tanker spot physical trade, with effect from Jan. 2, 2025.

In addition, Platts has launched carbon-exclusive $/mt Dirty Tanker freight assessments under new symbol codes for the Aframax 80kt UKC-UKC and the Aframax 70kt USGC-UKC benchmark assessments under the codes CETDF00 and CETDG00 respectively, enabling prevailing open interest on the routes to be settled at a carbon-exclusive price.

The two carbon-exclusive assessments are calculated by deducting the Platts Carbon Emission Charges, as per the phase-in schedule described in the Directive 2023/959 of the European Parliament and of the Council, from the spot carbon-inclusive freight on these routes:

- 70% of emissions reported in 2025 payable in 2026
- 100% of emissions reported in 2026 payable in 2027

Platts also publishes 12 carbon emission charges pertaining to inter- and intra-European Aframax routes.

Platts carbon emission charge Aframax freight assessments, in line with the final European Parliament Environmental Committee compromise text from May 10, 2023, reflect the costs to move crude oil or fuel oil on a tanker on each route, including the additional cost required to offset on a tank-to-wake basis through the EU Emissions Trading System (EU ETS):

- 100% of carbon emissions for intra-EU voyages and European Economic Area berths;
- 50% of carbon emissions for all inbound and outbound voyages between EU and non-EU member states;
- 0% of emissions while the ship is in non-member state ports.
- Platts carbon emission charge assessments reflect the costs to offset carbon emissions for tankers and reflect 100% of emissions payable, rather than the above stated EP EC phase-in scheduleof requirements.

Platts is employing baseline market norms for vessel speed and bunker fuel consumption, verified by extensive market surveys. The calculations use Platts daily EU Emission Allowance Nearest-December price (EADLP00).

The 'tank-to-wake' carbon emissions based on the fuel consumption are calculated using the carbon conversion factors relevant to the EU regulations. These carbon conversion factors are as below:

Assessment Name	Value	Symbol
Carbon Conversion Factor 0.5% VLSFO	3.151 t-CO2/t-fuel	ASFOA00
Carbon Conversion Factor 0.1% MGO	3.206 t-CO2/t-fuel	AMGOA00

Tanker Freight basis Cape of Good Hope

Platts assesses tanker freight based on the Cape of Good Hope (COGH) routing to reflect the movement of crude, dirty and clean products from Asia to Europe, as well as from Europe to Asia.

Below are the outright assessments basis Cape of Good Hope route:

Dirty

From	To	Cargo size (kt)	Lumpsum	$/mt
Persian Gulf	UK Continent	280	PGUKC00	PGUKB00
Persian Gulf	Mediterranean	280	PGUMD00	PGUME00
Persian Gulf	UK Continent	140	PGUCT00	PGUKF00
Persian Gulf	Mediterranean	140	PGMDB00	PGUKG00
Mediterranean	Far East	130	PGUKH00	PGUKJ00
Black Sea	Far East	135	PGUKI00	PGUKK00

Barge assessments

Platts publishes daily assessments for European dirty barge routes from Rotterdam to destinations in the Antwerp-Rotterdam-Amsterdam (ARA) region. These assessments are published in $/mt.

Size: The tonnage reflected is 4kt. Platts may consider charters of a similar size for assessment purposes, but these will be normalized to the assessed size.

Timing: Barge assessments reflect charters for journeys two to seven days forward from the date of publication.

Platts Base Rates

Platts Yearly and Dynamic Base Rates are a standardized estimate of the cost of moving a tanker for all assessed freight routes, with the exception of lump sum routes.

The calculation of the Platts Base Rate has one established assumption, which is to list all the possible costs for the entire voyage and divide it by the standard Aframax cargo size (80,000 mt) to arrive at the $/mt Base Rate, which equates to 100 points on the scale.

Platts Base Rates can be applied to calculate tanker freight rates basis points and dollars per ton as well as various product netback and net forward assessments, along with crude yield and netback prices.

Platts Base Rate calculations are in dollars per ton of cargo for a standard vessel basis a round voyage from a single load port or multiple load ports to a single discharge or multiple discharge ports and back to the first loading port.

The various variables and factors used in the calculation of Platts Base Rates are completely nominal including the daily hire charge of $16,500/day and do not reflect the existing earnings or the operating cost of the standard vessel.

The calculation of Platts Base Rates is based on the assumption that the vessel is able to sail along the given route to call and discharge at the cited ports.

Rates calculated do not include any taxes (on freight or miscellaneous costs), additional hull/machinery or war risk insurance costs or deballasting charges.

The calculated rates adhere to the International Maritime Organization emission regulations at ports and regions where they are mandatory such as the North Sea Emission Control Area (ECA), Baltic Sea ECA, Caribbean ECA, North American ECA and Mediterranean Sea. Port costs used in Base Rate calculations are collected through robust survey of port agents until November 30 of each year. Where port costs are received basis local currency, these are converted to US dollars by using an average rate of exchange from October 1 of the year before last, to September 30 of the year prior to the one for which the published Base Rates apply. For example, for 2026 Base Rates, port costs are converted to US dollars (where applicable) using the average rate of exchange from Oct. 1, 2024 to Sept. 30, 2025.

Port costs cover typical expenses incurred for the standard vessel's port call for loading or discharging. A complete list of the considered ports can be found here. For some particular cases, costs for loading and discharging are considered separately.

Port costs also include International Ship and Port Facility Security Code (ISPS) costs for ports where this is levied mandatorily.

Port charges considered are basis single trip. Where overtime cost is applicable, that would be included. The additional surcharges levied for different seasons are not considered.

Platts has published Base Rates using conventional hydrocarbon bunkers such as 0.5% Sulfur Marine bunker fuel, 0.1% Low Sulfur bunker fuel and alternative fuels including LNG and Methanol bunkers . All assessed routes and their respective symbols for each of the considered bunker fuels are available here. Rates for voyages currently not published are available upon request to shipping@spglobal.com.

Assumptions used in calculation:

Vessel Size - 105,000 dwt

Port days

Load – 2 days

Discharge – 2 days

Hire charge - $16,500 per day

	Conventional Bunker Fuel	LNG	Methanol
Vessel Speed	Laden – 13 knots Ballast – 12.50 knots	Laden – 13 knots Ballast – 12.00 knots	Laden – 13 knots Ballast – 13 knots

Carbon-inclusive Base Rates and EUA Charges

Platts carbon-inclusive Base Rates reflect all the costs of a round voyage for a tanker involving European ports, which include European Union Allowances (EUA) charges, in addition to the costs considered for Base Rates calculations. The current set of Platts Carbon-Inclusive Base Rates includes LNG, Methanol and Conventional bunker fuels such as MGO and VLSFO.

EUA charges are also published as a standalone value for each of the assessed routes. They are expressed in USD/mt of cargo and calculated based on distances travelled within and outside Emission Control Areas (ECA), estimated bunker consumption by fuel type for each area, and carbon conversion factors published in Annex 1 of Regulation (EU) 2015/757 of the European Parliament and of the Council on the monitoring, reporting and verification of carbon dioxide emissions from maritime transport:

Area	Type of Fuel	CCF (mt-CO2/mt-Fuel)
ECA	MGO	3.206 mt-CO2
	LNG	2.750 mt-CO2
	Methanol	1.375 mt-CO2
Non-ECA	VLSFO	3.151 mt-CO2
	LNG	2.750 mt-CO2
	Methanol	1.375 mt-CO2

In line with EU Directive 2023/959 of May 10, 2023, the carbon-inclusive Base Rates and EUA charges fully reflect the costs to offset:

- 100% of carbon dioxide emissions for intra-EU voyages and time spent in European Economic Area (EEA) berths.
- 50% of carbon dioxide emissions for all inbound and outbound voyages between the EU and non-EU member states.
- 0% of carbon dioxide emissions, while the vessel is in non-EU member state ports.

Yearly carbon-inclusive Base Rates and yearly EUA charges are calculated based on an average of Platts daily EU Emission Allowance Nearest-December price (EADLP00), from Oct. 1 2024 to Sept. 30 2025, equivalent to EUR 71.08725 /mt CO2 and converted to USD using an average of Euro/US$ forex rate at 16:30 London time (AAFCW00) from Oct. 1 2024 to Sept. 30 2025, equivalent to EUR 1.10619/USD.

Dynamic carbon-inclusive Base Rates and dynamic EUA charges are calculated based on Platts daily EU Emission Allowance Nearest-December price (EADLP00) and converted to USD using the Euro/US$ forex rate at 16:30 London time (AAFCW00).

Carbon-inclusive Base Rates and EUA charges published for 2026 are calculated basis the 100% of carbon emissions estimated for each route and that will be offset in 2027.

EUA charges published for 2026 do not consider bunker fuel changes derived from the designation of the Mediterranean Sea as an ECA.

Both carbon-inclusive Base Rates and EUA charges list of symbols and assessed routes are available here.

LPG freight

VLGC freight

Platts liquefied petroleum gas (LPG) freight assessments reflect the transactable value of chartering a Very Large Gas Carrier (VLGC) at the following times:

Singapore 17:00 – Asia Pacific and Middle East VLGC freight

Houston 13:30 – Americas VLGC freight

LPG freight is commonly traded in the spot market on a US dollar lump-sum or US dollar/mt basis, reflecting the total cost of chartering a ship of a specified size on a particular voyage. Lump-sum trades typically include harbor dues, port costs and other transportation costs. For routes which are assessed on a lump-sum basis, the $/mt assessment is calculated by dividing the lump-sum total by the size of the cargo assessed.

Size and specifications: The tonnage specified in the Platts assessment tables represents the weight of the cargo carried. Platts may normalize freight rates for charters of a different size for assessment purposes.

Timing: Platts assesses different laycan date ranges according to prevailing regional market practices. Platts reflects fixtures that fall within the typical date ranges in its assessments. Fixtures reported for dates outside of these typical ranges may be normalized to the assessed laycans for assessment purposes.

Asia Pacific and Middle East VLGC freight

Refrigerated freight rate assessments: Platts publishes four assessments for the cost of freight along major shipping routes in the refrigerated LPG markets. These assessments are published in dollars per metric ton, and

© 2026 by S&P Global Inc. All rights reserved.

reflect the cost of shipping refrigerated LPG in VLGCs. Platts surveys the market and reflects spot charter fixtures in the assessments, for cargoes loading 20-40 days from the date of assessment. The four routes assessed are Persian Gulf to Japan, Persian Gulf to South China, Persian Gulf to East China, Persian Gulf to East Africa. For the purposes of normalization, Persian Gulf reflects the port of Ras Tanura, with spot fixtures for nearby loading locations including Qatar and Bahrain normalized where needed. Japan deliveries are normalized to Chiba for freight assessments, while East China and South China are normalized to Shanghai and Guangzhou/Shenzhen and East Africa deliveries are normalized to Mombasa respectively.

Pressurized freight rate assessments: Platts publishes five assessments for the cost of freight along significant shipping routes in the Asia Pacific region's pressurized LPG markets. These assessments are published in dollars per metric ton, and reflect the cost of shipping pressurized LPG in small tankers typically carrying between 1,000 mt and 3,000 mt of mixed LPG. Platts surveys the market and reflects spot charter fixtures in the assessments, for cargoes loading seven to 15 days from the date of assessment. The routes assessed are (1) Thailand to the port of Guangzhou, (2) Thailand to the port of Guangxi (3) Thailand to the port of Shantou (4) Japan to the port of Shanghai and (5) South Korea to the port of Shanghai. For assessment purposes, Thailand loadings are normalized to Map Ta Phut, South Korea loadings are normalized to Ulsan/Onsan, and Japan to the port of Chiba.

Americas VLGC freight

VLGC Freight Houston-Japan: This assessment reflects the most competitive value of chartering a VLGC in the spot market to load propane from the US Gulf Coast for export to Japan. This has typically been via the Panama Canal. The assessment is published in both US dollars per metric ton and US cents per gallon.

VLGC Freight Houston-NWE: This assessment reflects the value of chartering a VLGC in the spot market to load propane for export to Northwest Europe. The assessment is published in both US dollars per metric ton and US cents per gallon.

VLGC Freight Houston-Morocco: This implied freight rate reflects the value of chartering a VLGC, from Houston to Morocco to transport a 44,000 mt cargo of LPG, loading 15-45 days forward from the date of publication, derived from an existing Houston-Northwest Europe VLGC spot freight assessment (Code: AAXIQ00). Platts has taken into account Marine Fuel 0.5%S prices at the relevant bunkering ports, port charges, vessel speed and fuel consumption in the calculation of the implied freight from the VLGC Freight Houston-NWE spot assessment. The assessment is published in US dollars per metric ton.

VLGC Freight USGC-East Africa: This implied freight rate reflects the value of chartering a VLGC, from Houston to Mombasa in East Africa to transport a 44,000 mt cargo of LPG, loading 15-45 days forward from the date of publication. Platts has considered Marine Fuel 0.5%S prices at the relevant bunkering ports, port charges, vessel speed and fuel consumption in the calculation of the implied freight from the VLGC Freight Houston-NWE spot assessment. The assessment is published in US dollars per metric ton.

VLGC Freight Houston-Suape: This freight rate reflects the value of chartering a VLGC, from Houston to Suape, Brazil to transport a 44,000 mt cargo of LPG, loading 15-45 days forward from the date of publication. Platts has considered Marine Fuel 0.5%S prices at the relevant bunkering ports, port charges, vessel speed and fuel consumption, and in the absence of market values or fixtures, may consider related markets to derive its assessment, such as the standalone Houston-NWE spot assessment. The assessment is published in US dollars per metric ton.

VLGC Freight Houston-Santos: This freight rate reflects the value of chartering a VLGC, from Houston to Santos, Brazil to transport a 44,000 mt cargo of LPG, loading 15-45 days forward from the date of publication. Platts has considered Marine Fuel 0.5%S prices at the relevant bunkering ports, port charges, vessel speed and fuel consumption, and in the absence of market values or fixtures, may consider related markets to derive its assessment, such as the standalone Houston-NWE spot assessment. The assessment is published in US dollars per metric ton.

MGC freight

MGC Freight Houston-Lome: This freight rate reflects the value of chartering a MGC vessel, from Houston to Offshore Lome, Togo to transport a 22,000 metric ton cargo of LPG, loading five to 15 days forward from the date of publication.

Platts may publish pricing data or fixtures for other cargo sizes or laycans, but these may be normalized for assessment purposes. The freight assessment is published in US dollars per metric ton and reflect the transactable value at 16:30 London time.

These values typically include port costs and other transportation costs.

Coaster freight

LPG Med-Morocco 4kt $/mt (ALPGA00): This assessment reflects the cost of chartering a LPG coaster vessel, transporting a typical 4,000 mt butane cargo from Lavera, France, to Mohammedia, Morocco, five to 15 days forward from the date of publication. Platts may publish pricing data or fixtures for other cargo sizes or laycans, but these may be normalized for assessment purposes. This freight assessment is published in US dollars/mt and reflects the transactable value at 16:30 London time. These values typically include harbor dues, port costs and other transportation costs.

© 2026 by S&P Global Inc. All rights reserved.

Dry bulk freight

Platts dry bulk spot freight assessments reflect the transactable value of chartering a vessel at the following times:

Singapore 17:30 – Asia Pacific Dry Bulk

Singapore 16:30 – Asia Pacific Cement & SCMs freight

London 16:30 – Atlantic Dry Bulk

Dry bulk carriers are defined as those ships carrying dry bulk materials, including iron ore, thermal coal, metallurgical coal, alumina, bauxite, nickel ore, spodumene, logs, wood chips, concentrates and ores, cement, clinker, supplementary cementitious materials, fertilizers, sand, carbon steel products, stainless steel products, aluminum ingots, copper cathodes, ferrous scrap, nonferrous scrap, limestone and dry edibles (sugar, grains, oilseeds).

Size & specifications: The tonnage specified in the assessment tables represents the weight of the cargo carried. Platts may normalize freight rates for charters of a different size for assessment purposes. In addition, any loadings or deliveries to alternate ports, or fixtures outside of specified laycans, may be normalized to the stated basis for assessment purposes.

Dry Bulk Vessel Sizes

Vessel class	Typical size (dwt)	Vessel age	Draft (meters)	Length overall (meters)
Handysize	32,000	Up to 20 years	10.15	178
Handymax	45,000	Up to 20 years	11.00	185
Supramax	56,000-60,000	Up to 20 years	12.85	190
Ultramax	61,000-66,000	Up to 20 years	13.50	200
Panamax	76,000-82,000	Up to 20 years	14.25	229
Capesize	177,500-182,000	Up to 20 years	18.20	289

Iron ore

Assessments reflect iron ore freight between key production centers, such as Australia, India (east and west coasts), Brazil and South Africa, to key consumption centers, such as Qingdao in North China.

Timing: Assessments reflect vessels chartered for loading 10 to 40 days forward from the date of assessment.

Normalization: For Asia Pacific assessments, Platts freight assessments are based off freight differentials to major import ports from the basis port of Qingdao in North China. This is on a Free In (loading costs borne by the charterer) and Free Out (discharge costs borne by charterer) basis to other ports in North China (Caofeidian, Tianjin & Xingang), East China (Beilun) and South China (Zhanjiang & Fangcheng).

Thermal coal

Platts thermal coal assessments reflect Capesize, gearless Panamax/Kamsarmax, geared Supramax/Ultramax and Handymax vessels. Spot fixtures for geared vessels may be normalized for assessment purposes.

Timing: All assessments reflect vessels chartered for loading five to 40 days forward from the date of publication. For example, on July 1, Platts assesses rates for vessels loading between July 6 and August 10.

Normalization: Platts freight assessments to China are based on freight differentials to major import ports from the basis port of Qingdao in North China. This is on a Free In (loading costs borne by the charterer) and Free Out (discharge costs borne by charterer) basis to other ports in South China (Fangcheng). To India, Platts freight assessments are basis Mundra on the West Coast of India and basis Krishnapatnam and Paradip on the East Coast of India. They are based on a Free In & Out to other Indian ports in West Coast India (Dahej, New Mangalore, Kandla & Navlakhi) and East Coast India (Ennore & Vizag). Platts also assesses freight from Newcastle, Australia into Campha, Vietnam on a Free In & Out basis.

Implied Freights: In these calculated assessments, Platts has included port charges, vessel speed and fuel consumption. After a robust survey of market participants, Platts has arrived at these values that reflect standard market practice.

The Newcastle, Australia to Kinuura, Japan 75kt Panamax freight assessment is an implied number derived from the

Metallurgical coal petcoke and scrap

Platts metallurgical coal Panamax assessments reflect gearless vessels; spot prices for geared vessels may be normalized for assessment purposes.

Timing: Assessments for Australia to China reflect vessels chartered for loading 10-25 days forward from the date of assessment. For example, on July 1, Platts assesses rates for vessel loadings between July 11 and July 26. Assessments for US to ARA/Brazil/China/India reflect vessels chartered for loading 14-45 days forward from the date of assessment.

In addition to its daily assessments, Platts assesses a weekly spot market freight rate for the chartering of Panamax vessels for metallurgical coal. The assessment reflects cargoes loading from Vancouver on the west coast of Canada to Vizag on the east coast of India. The assessment reflects the value that prevails at the Asian market on close of 17:30 Singapore time every Friday or last working day of the week if Friday is a holiday. Price assessments for Canada to India reflect vessels for loading 15-45 days forward from the date of assessment.

Implied Freight: The Vostochny, CIS Russian Far East to Paradip, East Coast India 75kt Panamax freight assessment is an implied number derived from the Hay Point, Australia to Paradip, East Coast India Panamax Time Charter Equivalent (TCE) assessment. Platts has included port charges, vessel speed and fuel consumption. After a robust survey of market participants, Platts has arrived at these values that reflect standard market practice. The bunkering port considered is Singapore.

Alumina and bauxite

Timing: Alumina assessments reflect vessels chartered for loading 15- 30 days forward from the date of assessment. For bauxite, the assessments reflect vessels chartered for loading 15-40 days forward from the date of assessment.

Size & specifications: Platts alumina Handysize assessments reflect cargoes of 30kt. Spot rates for Handysize cargoes of between 25kt and 35kt as well as spot rates for Handymax and Supramax vessels, may be normalized to the defined Handysize basis.

Platts bauxite Capesize assessment reflects cargoes of 170kt loaded out of Kamsar, Guinea and discharged at Yantai, China. Slightly larger quantities loaded on Newcastlemax vessels and also those fixtures done to other discharge ports in China will be normalized to the defined terms. Assessments to San Ciprian, Spain reflect cargo sizes of 59kt loaded from Kamsar.

Sugar and grains

Platts assesses weekly spot market freight rates for the chartering of dry bulk vessels for sugar every Thursday. In the event of Thursday being a public holiday in Singapore, the assessment will be published on the previous working day.

Timing: Platts assesses different laycan date ranges according to prevailing regional market practices. Platts reflects fixtures that fall within the typical date ranges in its assessments. Fixtures reported for dates outside of these typical ranges may be normalized to the assessed laycans for assessment purposes.

Implied Freight: The Vancouver, Canada to Pyeongtaek, South Korea 65kt Panamax freight assessment is an implied number derived from the Vancouver, Canada, to the Qingdao, China Panamax Time Charter Equivalent (TCE) assessment. The Santos, Brazil to Cigading, Indonesia 50kt sugar assessment is an implied number derived from the Santos, Brazil to Qingdao, China Supramax TCE assessment.

Platts has included port charges, vessel speed and fuel consumption. After a robust survey of market participants, Platts has arrived at these values that reflect standard market practice. The bunkering ports considered are South Korea (Busan/Ulsan) and Gibraltar respectively. Platts publishes four daily dry bulk Panamax implied freight assessments derived from the Platts KMAX 9 index for 60,000 mt of wheat shipments to Indonesia, with load ports in Kwinana, Australia, in Vancouver, Canada, in Constanza, Romania, and in Chornomorsk, Ukraine Platts publishes one daily dry bulk Supramax implied freight assessment derived from the Platts GSP-11 index for 50,000 mt wheat shipments to Indonesia, with load port in Varna, Bulgaria. Vessel delivery for the trip with cargo loading in Kwinana, Australia is assumed to be Singapore. For the trip with cargo loading in Vancouver, Canada vessel delivery is assumed to be in Qingdao, China, and for the trip with cargo loading in Constanza, Romania vessel delivery is assumed to be in Canakkale, Turkey. Platts calculations include specific port charges, loading and discharge rates, vessel speed, fuel consumption, and other relevant expenses specific to each route, following a robust survey of market participants. Loading and discharge terms are based on a Saturdays, Sundays, and Holidays Excluded (SSHEX) schedule assumption with 105 working hours on a given week. Loading calculations from the port of Constanza, Romania include a 12-hour turn time assumption, while transiting the Turkish Straits includes a waiting assumption of two days each way. Bunkering in Singapore and Istanbul is assumed to add one day in the relevant voyages. The assessments are published in US dollars/mt, reflect a lay days-cancelling period of 15-30 days forward and are published in price steps of 25 cents.

Cement and Supplementary Cementitious Materials (SCMs)

Platts assesses weekly spot market freight rates for the chartering of dry bulk vessels for cement, clinker and supplementary cementitious materials every Thursday. In the event of Thursday being a public holiday in respective region, the assessment will be published on the previous working day.

Platts assesses 3 weekly cement and clinker handysize freight assessments at 16:30 UK timestamp following the UK holiday calendar.

Platts assesses 3 weekly clinker and GBFS freight assessment at 16:30 Singapore timestamp following the Singapore holiday calendar.

Timing: Platts assesses different laycan date ranges according to prevailing regional market practices. Platts reflects fixtures that fall within the typical date ranges in its assessments. Fixtures reported for dates outside of these typical ranges may be normalized to the assessed laycans for assessment purposes.

Dry bulk Time Charter Equivalents (TCEs)

Platts also publishes daily spot market Time Charter Equivalent assessments for dry bulk vessels. Each TCE assessment for Supramax, Ultramax, Panamax/Kamsarmax and Capesize vessels reflects the $/day pricing derived from the respective voyage rates published by Platts on a $/mt basis. The TCE assessments for Newcastlemax vessels using LNG as bunker fuel reflect the $/day pricing derived from the respective Capesize voyage rates published by Platts on a $/mt basis.

The TCE is calculated using bunker prices published by Platts. The Durban and Rotterdam bunker prices, which are assessed out of London, are normalized to the Singapore close for use in the respective Asia Pacific TCE assessments. For Newcastlemax TCEs, the Puerto Bolivar to Rotterdam TCE assessment is calculated using the most recent available Rotterdam LNG bunker assessment.

The port charges, vessel speed and consumption used in the TCE calculations are arrived at by extensive market survey and reflect market practices. All assessments are basis loading and discharge on Sundays and holidays included per weather working day at both ends. Sea margin of 5% and total commission of 5% are considered.

The Cape T4 Index is a daily weighted average Capesize time charter equivalent (TCE) rate reflecting ton-mile demand on four key TCE assessments. The Cape T4 Index assessment is derived by applying an allocated weightage to the daily TCE assessments of four key round voyages, published at the 17:30 Singapore (09:30 GMT) close.

The index assessment will not be published on days when Singapore is on a public holiday.

Weightage for the individual TCE assessments is determined by the volume of Capesize vessel movement observed between the related geographical regions associated with the respective voyages between January 1, 2020 and December 31, 2022 from the trade flow software S&P Global Commodities at Sea. It is calculated in ton-miles.

Ton-mile demand is calculated by multiplying the volume of cargo moved in metric tons by distance travelled in miles. Platts may review the weightage in the event of a substantial change in the observed trade flows.

Route	Voyage	Symbol code	Weightage (%)
PCTCE5L	N China Australia Round Voyage	MRYAB00	48
PCTCE8L	N China S Africa Round Voyage	MRYBB00	5
PCTCE3AL	N China Atlantic Round Voyage	MRYCB00	44
PCTCE7L	Trans-Atlantic Round Voyage	CIBCS00	3

Platts publishes TCE rates for both scrubber-fitted tonnage burning HSFO and non-scrubber tonnage burning 0.5% LSFO. The CapeT4S Index basis HSFO is made up as follows:

Route	Voyage	Symbol code	Weightage (%)
PCTCE5	N China Australia Round Voyage	MRYAA00	48
PCTCE8	N China S Africa Round Voyage	MRYBA00	5
PCTCE3A	N China Atlantic Round Voyage	MRYCA00	44
PCTCE7	Trans-Atlantic Round Voyage	CRYAA00	3

The KMAX 9 Index is a daily weighted average Kamsarmax time charter equivalent (TCE) rate reflecting ton-mile demand on nine key TCE assessments. The KMAX 9 index assessment for the 81,000 dwt Kamsarmax class vessel is derived by applying an allocated weighting to the daily Panamax TCE assessments of six key voyages published at the 17:30 (09:30 GMT) Singapore close and three key voyages published at the 16:30 London close.

The index assessment will not be published on days when either Singapore or London, or both locations are out on a public holiday.

Weighting for the individual TCE assessments was determined by the volume of Kamsarmax vessel movements observed between the regions associated with the respective voyages over January 1, 2020 to December 31, 2022 using the trade flow software S&P Global Commodities at Sea. It is calculated in ton-miles.

The weighting for the average TCE assessment is as follows:

Route	Voyage	Symbol code	Weightage (%)
PPTCE6eL	S Kalimantan, Indonesia – Paradip, India	CRYBB00	2
PPTCE44L	E Kalimantan, Indonesia – Guangzhou	CRYBE00	6
PPTCE3eL	Richards Bay, South Africa – Paradip, India	CRYDB00	6
PPTCE8L	Hay Point, Australia – Paradip, India	MRYEB00	5
PPTCE7L	Hay Point, Australia – Qingdao, China	MRYFB00	16
PPTCE20L	Vancouver, Canada – Qingdao, China	CDCAE00	9
PPTCE27L	New Orleans, Louisiana – Qingdao, China	DNQBB00	15
PPTCE26L	Santos, Brazil – Qingdao, China	GSBQC00	31
PPTCE10L	Hampton Roads, Virginia – Rotterdam, Netherlands	GCHRB00	10

Platts publishes TCE rates for both scrubber-fitted tonnage burning HSFO and non-scrubber tonnage burning 0.5% LSFO. The KMAX 9S Index basis HSFO is made up as follows:

Route	Voyage	Symbol code	Weightage (%)
PPTCE6e	S Kalimantan, Indonesia – Paradip, India	CRYBA00	2
PPTCE44	E Kalimantan, Indonesia – Guangzhou	CRYAC00	6
PPTCE3e	Richards Bay, South Africa – Paradip, India	CRYDA00	6
PPTCE8	Hay Point, Australia – Paradip, India	MRYEA00	5
PPTCE7	Hay Point, Australia – Qingdao, China	MRYFA00	16
PPTCE20	Vancouver, Canada – Qingdao, China	CDCAD00	9
PPTCE27	New Orleans, Louisiana – Qingdao, China	DNQBS00	15
PPTCE26	Santos, Brazil – Qingdao, China	GSBQA00	31
PPTCE10	Hampton Roads, Virginia - Rotterdam, Netherlands	GCHRA00	10

The APSI 5 index is a demand-weighted average of five key Supramax TCE assessments within the Asia Pacific, basis 0.5% sulfur bunker fuel and is published at the 17:30 Singapore (09:30 GMT) close.

© 2026 by S&P Global Inc. All rights reserved.

The index assessment will not be published on days when Singapore is on a public holiday.

Weighting for the individual TCE assessments was determined by the volume of Supramax & Ultramax vessel movements observed between the regions associated with the respective voyages from January 1, 2020 to December 31, 2022 using data from the trade flow software S&P Global Commodities at Sea. It is calculated in ton-miles.

The weighting for the average TCE assessment is as follows:

Route	Voyage	Symbol code	Weightage (%)
PSTCE33L	Newcastle, Australia-Campha, Vietnam	CRYNA00	49
PSTCE22L	S Kalimantan, Indonesia-Paradip, India	CRYFB00	8
PSTCE24L	E Kalimantan, Indonesia-Guangzhou, China	CRYBD00	10
PSTCE21L	Richards Bay, South Africa-Paradip, India	CRYHB00	23
PSTCE19L	Mina Saqr, UAE-Paradip, India	MRYGB00	10

Platts publishes TCE rates for both scrubber-fitted tonnage burning HSFO and non-scrubber tonnage burning 0.5% LSFO. The APSI 5S Index basis HSFO is made up as follows:

Route	Voyage	Symbol code	Weightage (%)
PSTCE33	Newcastle, Australia-Campha, Vietnam	CRYNB00	49
PSTCE22	S Kalimantan, Indonesia-Paradip, India	CRYFA00	8
PSTCE24	E Kalimantan, Indonesia-Guangzhou, China	CRYAB00	10
PSTCE21	Richards Bay, South Africa-Paradip, India	CRYHA00	23
PSTCE19	Mina Saqr, UAE-Paradip, India	MRYGA00	10

The APUI 5 index is a demand-weighted average of five key Ultramax TCE assessments within the Asia-Pacific, basis 0.5% sulfur bunker fuel and is published at the 17:30 Singapore (09:30 GMT) close.

The index assessment will not be published on days when Singapore is on a public holiday.

Weighting for the individual TCE assessments was determined by the volume of Supramax and Ultramax vessel movements observed between the regions associated with the respective voyages from January 1, 2020 to December 31, 2022 using data from the trade flow software S&P Global Commodities at Sea. It is calculated in ton-miles.

The weighting for the average TCE assessment is as follows:

Route	Voyage	Symbol code	Weightage (%)
PUTCE33L	Newcastle, Australia-Campha, Vietnam	CRYNA00	49
PUTCE22L	S Kalimantan, Indonesia-Paradip, India	CRYFB00	8
PUTCE24L	E Kalimantan, Indonesia-Guangzhou, China	CRYBD00	10
PUTCE21L	Richards Bay, South Africa-Paradip, India	CRYHB00	23
PSTCE19L	Mina Saqr, UAE-Paradip, India	MRYGB00	10

Platts publishes TCE rates for both scrubber-fitted tonnage burning HSFO and non-scrubber tonnage burning 0.5% LSFO.

The APUI 5S Index basis HSFO is made up as follows:

Route	Voyage	Symbol code	Weightage (%)
PUTCE33	Newcastle, Australia-Campha, Vietnam	CRYNB00	49
PUTCE22	S Kalimantan, Indonesia-Paradip, India	CRYFA00	8
PUTCE24	E Kalimantan, Indonesia-Guangzhou, China	CRYAB00	10
PUTCE21	Richards Bay, South Africa-Paradip, India	CRYHA00	23
PUTCE19	Mina Saqr, UAE-Paradip, India	MRYGA00	10

The NMAX GT4 Index is a daily weighted average Newcastlemax time charter equivalent (TCE) rate reflecting ton-mile demand on four key TCE assessments. The NMAX GT4 Index assessment is derived by applying an allocated weightage to the daily TCE assessments of four key round voyages, published at the 17:30 Singapore (09:30 GMT) close.

The index assessment will not be published on days when Singapore is on a public holiday.

Weightage for the individual TCE assessments is determined by the volume of Capesize and Newcastlemax vessel movements observed between the related geographical regions associated with the respective voyages over January 1, 2020 and December 31, 2022 from the trade flow software S&P Global Commodities at Sea. It is calculated in ton-miles.

Route	Voyage	Symbol code	Weightage (%)
PNTCE5G	Port Hedland-Qingdao	PHQNA00	48
PNTCE3AG	Tubarao-Qingdao, China	TQPRA00	44
PNTCE8G	Saldanha Bay-Qingdao	SBQNA00	5
PNTCE7G	Puerto Bolivar-Rotterdam	PBRNA00	3

The ASI 6 index is a demand-weighted average of six key TCE assessments basis 0.5% sulfur bunker fuel, while ASI 6S Index is an average of the same TCE assessments basis scrubber-fitted ships.

The ASI 6 index assessments for the 57,000 dwt Supramax class vessel are derived by applying an allocated weighting to the daily Supramax TCE assessments of six key voyages published at the 16:30 London close .

The index assessment will not be published on days when London is on a public holiday.

Weighting for the individual TCE assessments was determined by the volume of Supramax and Ultramax vessel movements observed between the regions associated with the respective voyages between January 1, 2020 to December 31, 2022 using the trade flow software S&P Global Commodities at Sea. It is calculated in ton-miles.

The weighting for the average TCE assessment is as follows:

Basis bunker fuel 0.5%

Route	Voyage	Symbol code	Weightage (%)
PSTCE12L	SWP, New Orleans, Louisiana to Kashima, Japan	GNOLC00	22
PSTCE17L	SWP, Houston, Texas to Krishnapatnam, India	GPHTC00	17
PSTCE11L	SWP, New Orleans, Louisiana to Iskenderun, Turkey	NIPTE00	5
PSTCE291L	Gibraltar, Santos, Brazil to Qingdao, China	GSQCB00	33
PSTCE32L	Recalada San Lorenzo, Argentina to Bejaia, Algeria	GARAA00	20
PSTCE16L	Rotterdam, Netherlands to Aliaga, Turkey	RAFTE00	3

Platts publishes TCE rates for both scrubber-fitted tonnage burning HSFO and non-scrubber tonnage burning 0.5% LSFO.

The ASI 6S Index basis HSFO is made up as follows:

Basis scrubber fitted

Route	Voyage	Symbol code	Weightage (%)
PSTCE12	SWP, New Orleans, Louisiana to Kashima, Japan	GNOLA00	22
PSTCE17	SWP, Houston, Texas to Krishnapatnam, India	GPHTA00	17
PSTCE11	SWP, New Orleans, Louisiana to Iskenderun, Turkey	NIPTS00	5
PSTCE291	Gibraltar, Santos, Brazil to Qingdao, China	GSQCA00	33
PSTCE32	Recalada San Lorenzo, Argentina to Bejaia, Algeria	GARAB00	20
PSTCE16	Rotterdam, Netherlands to Aliaga, Turkey	RAFTS00	3

The AUI 6 index is a demand-weighted average of the six key time charter equivalent assessments basis 0.5% sulfur bunker fuel, while AUI 6S is an average of the same TCE assessments basis scrubber-fitted ships.

The index assessment will not be published on days when London is on a public holiday.

The AUI 6 index assessments for the 63,000 dwt Supramax and Ultramax class vessel are derived by applying an allocated weighting to the daily Ultramax TCE assessments of the six key voyages published at the 16:30 London close.

The weighting for the average TCE assessment is as follows:

Basis bunker fuel 0.5%

Route	Voyage	Symbol code	Weightage (%)
PSTCE12L	SWP, New Orleans, Lousiana to Kashima, Japan	DNQBA00	22
PSTCE17L	SWP, Houston, Texas to Krishnapatnam, India	GPHTE00	17

PSTCE32L	Recalada San Lorenzo, Argentina to Bejaia, Algeria	GARBF00	20
PSTCE16L	Rotterdam, Netherlands to Aliaga, Turkey	MSRAA00	3

Platts publishes TCE rates for both scrubber-fitted tonnage burning HSFO and non-scrubber tonnage burning 0.5% LSFO.

The AUI 6S Index basis HSFO is made up as follows:

Basis scrubber fitted

Route	Voyage	Symbol code	Weightage (%)
PSTCE12	SWP, New Orleans, Lousiana to Kashima, Japan	DNQAA00	22
PSTCE17	SWP, Houston, Texas to Krishnapatnam, India	GPHTF00	17
PSTCE11	SWP, New Orleans, Louisiana to Iskenderun, Turkey	CIPHB00	5
PSTCE291	Gibraltar, Santos, Brazil to Qingdao, China	GSBQF00	33
PSTCE32	Recalada San Lorenzo, Argentina to Bejaia, Algeria	GARBG00	20
PSTCE16	Rotterdam, Netherlands to Aliaga, Turkey	MSRAB00	3

The GSP 11 index is a demand-weighted average of eleven key TCE assessments basis 0.5% sulfur bunker fuel, while GSP 11S is an average of the same TCE assessments basis scrubber-fitted ships.

The GSP 11 and GSP 11S index assessments for the 57,000 dwt Supramax class vessel are derived by applying an allocated weighting to the daily Supramax TCE assessments of eleven key voyages published at the 16:30 London close. The index assessment will not be published on days when either Singapore or London, or both have a public holiday.

The weightings for the individual TCE assessments are:

Basis bunker fuel 0.5%:

Platts publishes individual scrubber premium indexes for Capesize, Panamax, Ultramax and Supramax ships.

The scrubber premium indexes for Capesize are assessed as a difference between Cape T4S Index (CAPT400, basis scrubber-fitted) and the Cape T4 Index (ACAZA00, basis bunker fuel 0.5%). In the case of Panamax scrubber premium index, PPSI is assessed on a basis of the difference between the KMAX 9S Index (AKMIB00, basis scrubber-fitted) and the KMAX 9 Index (AKMIA00, basis bunker fuel 0.5%).

The scrubber premium indexes for Ultramax and Supramax sector reflect the average of the difference between the TCE returns for scrubber-fitted and non-scrubber ships for respective routes under each vessel class.

Platts reflects the floating freshwater surcharge implemented by the Panama Canal Authority (PCA) on the relevant dry bulk time charter equivalents.

Global Dry Index

The Platts Dry Index is published in dollars per day ($/Day) and is derived by applying an allocated weighting to the daily Cape T4, KMAX 9, APUI 5, APSI 5, AUI 6 and ASI 6 indexes published at 17:30 (0930 GMT) Singapore close and at 16:30 (1630 GMT) London close.

The Platts Dry Index is an indicator of the global dry bulk shipping market's performance. It captures the demand for moving widely consumed commodities such as grains, coal, chrome, copper, manganese, nickel, iron ore, steel, alumina, bauxite and spodumene.

The index assessment will not be published on days when either Singapore or London, or both have a public holiday.

Weighting for the individual indexes is determined by the volume of Capesize, Kamsarmax, Ultramax and Supramax vessel movements observed between the trading regions from the trade flow software S&P Global Commodities at Sea. It is calculated in ton-miles.

Platts may review the weightage in the event of a substantial change in observed trade flows.

The weighting for the Platts Dry Index is as follows, based on flows observed over Jan. 1, 2020, to Dec. 31, 2022:

Basis Bunker Fuel 0.5%

Vessel	Index	Symbol code	Weighting (%)
Capesize	Cape T4	ACAZA00	60
Kamsarmax	KMAX 9	AKMIA00	25
AP Ultramax	APUI 5	APUIA00	5
AP Supramax	APSI 5	APSIA00	5
Atlantic Ultramax	AUI 6	AUIXA00	2.5
Atlantic Supramax	ASI 6	AIDXA00	2.5

Basis Scrubber Fitted

Vessel	Index	Symbol code	Weighting (%)
Capesize	Cape T4S	CAPT400	60
Kamsarmax	KMAX 9S	AKMIB00	25
AP Ultramax	APUI 5S	APUIB00	5
AP Supramax	APSI 5S	APSIB00	5
Atlantic Ultramax	AUI 6S	AUIXB00	2.5
Atlantic Supramax	ASI 6S	AIDXB00	2.5

Period rates

Assessment	CODE	Mavg	Cargo Size	CURRENCY	UOM	Vessel Delivery	Bunkering Port
Atlantic Panamax Long-term Period TCE $/day	APXLP00	APXLP03	NA	US dollars	Week	Atlantic	NA
Atlantic Panamax Short-term Period TCE	APXSP00	APXSP03	NA	US dollars	Week	Atlantic	NA

Atlantic Period Rates

Platts publishes two weekly Atlantic period Time Charter Equivalent, or TCE, assessments. These include a short-term assessment for the charter of a vessel for a duration of 4-6 months and a long-term assessment for 12-15 months.

The specifications for both assessments are:

Specifications	
Age	Maximum 15 years
Size	82,000 dwt
Daily Bunker Consumption	23.5 mt/d at 12.5k ballast; 11.5k laden
Delivery	Gibraltar
Time stamp	16:30 London timestamp

The assessments are:

Assessment Name	Symbol Code	Period	Delivery	Redelivery
Atlantic Panamax Short-term Period TCE $/day Wkly	APXSP00	4-6 months	Gibraltar	Worldwide
Atlantic Panamax Long-term Period TCE $/day Wkly	APXLP00	12-15 months	Gibraltar	Worldwide

These assessments follow the London publishing schedule.

Carbon-Inclusive Dry Bulk Freight & Carbon Emission Charges

Platts publishes daily all-inclusive carbon-inclusive freight assessments for the laden leg of key inter- and intra-European dry bulk trade voyage routes, along with their standalone carbon emission charge assessments.

The assessments cover three key Capesize voyage routes, five Panamax and Kamsarmax voyage routes, and three Supramax voyage routes:

Route	Segment	Load Port	Discharge port	Cargo Size (kt)	Carbon-Inclusive Freight Platts Symbol	Carbon Emission Charge Platts Symbol
PC2	Capesize	Tubarao, South Brazil	Rotterdam, Netherlands	170	ADBFO00	ADBFP00
PC19	Capesize	Hay Point, Northeast Australia	Rotterdam, Netherlands	160	ADBFK00	ADBFL00
PC7	Capesize	Puerto Bolivar, Colombia	Rotterdam, Netherlands	150	ADBFM00	ADBFN00
PP31	Panamax	Port Cartier, East Coast Canada	Rotterdam, Netherlands	70	ADBFG00	ADBFH00
PP11	Panamax	Ventspils, Latvia	Rotterdam, Netherlands	70	ADBFE00	ADBFF00
PP9	Panamax	Mobile, US Gulf Coast	Rotterdam, Netherlands	70	ADBFC00	ADBFD00
PP10	Panamax	Hampton Roads, US East Coast	Rotterdam, Netherlands	70	ADBFA00	ADBFB00
PP40	Panamax	Kamsar, West Africa	San Ciprian, Spain	59	ADBFI00	ADBFJ00
PS14	Supramax	Riga, Latvia	Aliaga, Turkey	35	ADBFU00	ADBFV00
PS16	Supramax	Rotterdam, Netherlands	Aliaga, Turkey	40	ADBFQ00	ADBFR00
PS25	Supramax	Rotterdam, Netherlands	Aliaga, Turkey	30	ADBFS00	ADBFT00

Based on the EU Emission Trading System (EU ETS) phased-in inclusion of shipping, the carbon emission charge and the carbon-inclusive dry bulk freight assessments reflect 40% of the carbon dioxide emissions created on voyages involving European Union ports and European Economic Area berths according to the scope described above for 2024, increasing to 70% for 2025 and to 100% for 2026 onwards.

In addition, the carbon emission charge and the carbon-inclusive dry bulk freight assessments reflect the cost to offset:

100% of carbon dioxide emissions for intra-EU voyages and time spent in European Economic Area (EEA) berths,

50% of carbon dioxide emissions for all inbound and outbound voyages between EU and non-EU member states.

Platts publishes the values as defined in the relevant European Union legislation and will reflect any updates accordingly.

The assessments are published in US dollars/mt.

The calculations use the daily EU Emission Allowance Nearest-December price (EADLP00) as published by Platts. The voyage carbon emissions based on fuel consumption are calculated using the carbon conversion factors published in Annex 1 of Regulation (EU) 2015/757 of the European Parliament and of the Council on the monitoring, reporting, and verification of carbon dioxide emissions from maritime transport.

These carbon conversion factors, published by Platts are:

Assessment Name	Value	Daily Code
Carbon Conversion Factor 0.5% VLSFO	3.151 t-CO2/T-fuel	ASFOA00
Carbon Conversion Factor 0.1% MGO	3.206 t-CO2/T-fuel	AMGOA00

Box Rates, Platts Bunker Charges and Platts Carbon Emissions Charges

Box rates

Container vessels are defined as those that carry their load in standardized intermodal containers, typically 20- foot (TEU) or 40- foot equivalent (FEU) containers. The Platts Container Rates are assessed on a FAK (Freight All Kinds) basis, and have the following inclusions and exclusions in assessment formula:

Include	Exclude
Peak Season Surcharge (PSS)	Premium Container Rates
Bunker Adjustment Factor (BAF)/ Emergency Bunker Surcharge	Terminal Handling Charges (THC)
General Rate Increases (GRI)	(EU ETS) Emissions Surcharge
Operations Cost Recovery	Import/Export Service Fees
Rate Restoration Charge	Overweight Surcharge (OWS)
Equipment Imbalance Surcharge (EIS)	Destination Delivery Charge (DDC)
War Risk Surcharge	Detention and Demurrage (D&D)

Platts box rate assessments reflect the transactable value for carrying 40-foot equivalent (FEU) containers or 20-foot equivalent (TEU) containers at 16:30 London time, 13:30 Houston time, and 16:30 India time, depending on the route.

Assessments closing at 16:30 London time:

Location: Platts assesses a number of key shipping regions under broad geographic descriptions.

North Continent: Bilbao to Hamburg basis Rotterdam, Hamburg, and Antwerp

United Kingdom: UK basis Felixstowe, London Gateway & Southampton

Mediterranean: Gibraltar to Trieste, excluding North Africa basis Barcelona, Valencia, and Algeciras

East Coast North America: Atlantic Coast including Canada basis New York, Savannah, Charleston, and Norfolk

West Coast North America: Pacific Coast including Canada basis Los Angeles and Long Beach

US Gulf Coast: Houston to Mobile basis Houston, Mobile and Tampa

East Coast South America: Atlantic Coast including Argentina basis Buenos Aires, Santos, and Cartagena

West Coast South America: Pacific Coast from Chile to Colombia basis Santiago and Callao

Indian Sub-Continent: Karachi to Chittagong basis Jawaharlal Nehru Port and Mundra

West Coast India: Mundra, JNPT, Mumbai basis Jawaharlal Nehru Port and Mundra

Middle East: Jebel Ali to Salalah basis Jebel Ali

North Asia: Tokyo to Hong Kong basis Shanghai, Ningbo, and Shenzhen

Southeast Asia: Hong Kong to Singapore basis Singapore and Port Klang

East Coast Australia: All East Coast Australia ports basis Brisbane, Sydney, Melbourne

West Coast Australia: All West Coast Australia ports basis Fremantle

Timing: Assessments reflect spot market container prices for loading five to 25 days forward from the date of assessment.

Platts assesses daily spot market $/FEU and $/TEU rates for carrying a FEU or a TEU container on several routes. For specific short haul routes, Platts also distinguishes between carrier transported and Non Vessel Owning Common Carrier (NVOCC) freight rates to reflect the two-tier markets. These rates are assessed on both $/TEU and $/FEU basis and are indicated as PCN or TCN in the symbols. Additionally, Platts also assesses long-term freight rates from North Asia-North Continent routings on a $/FEU basis. In addition, Platts also publishes the Platts Container Index, which is based on a weighted average of the assessed routes. The percentages have been derived from Platts software S&P Global Commodities at Sea and extensive market survey. The percentage breakdown is in the Platts Container Index table in this section.

Canals: Assessments for voyages which involve a canal transit, including the Suez Canal and the Panama Canal, are inclusive of any canal fees.

Platts Bunker Charges

The above variables used in calculating bunker charge assessments are regularly updated to reflect market practice and new regulations.

The canal transit allocations, in days, used in the assessments are:

Canal transit allocations	Days
Panama Canal Northbound Transit	1.0
Panama Canal Southbound Transit	1.0
Suez Canal Northbound Transit	1.0
Suez Canal Southbound Transit	1.0

PBC27 and PBC28	Qingdao, Shanghai, Yngshan, Brisbane, Sydney, Melbourne	9.5 knots front haul, 11 knots back haul	5,680 TEU	66mt per day at front haul speed; 79.2mt back haul speed	70% and 30%
PBC29 and PBC30	Busan, Lazaro Cardenas, Manzanillo, Balboa, Buenaventura, Callao, Coronel, San Antonio, Yantian, Kwai Chung	15 knots front haul, 16 knots back haul	8,250 TEU	109mt per day at front haul speed; 120.2mt back haul speed	70% and 30%
PBC31 and PBC32	Singapore, Hong Kong, Shanghai, Nongbo-Zhoushan, Shenzhe, Santos, Paranagua, Itapoa, Buenos Aires, Montevideo	13 knots front haul, 12 knots back haul	8,100 TEU	92.2mt per day at front haul speed; 83mt back haul speed	70% and 30%
PBC35 and PBC36	Algericas, Tema, Cotonou, Lagos, Dakar, Abadijan, Valencia, Kribi	11.5 knots front haul, 13.5 knots back haul	3,200 TEU	50.5mt per day at front haul speed; 61mt per day back haul speed	70% and 30%
PBC37 and PBC38	Shanghai, Zhoushan, Guangzhou, Port Klang, Singapore, Mombasa, Dar Es Salaam	13.5 knots front haul, 14 knots back haul	3,100 TEU	57.6mt per day at front haulspeed; 60mt per day back haul speed	70% and 30%
PBC39 and PBC40	Mundra, Qasim, Jeddah, New York/New Jersey, Virginia	14.5 knots front haul, 10.5 knots back haul	6,080 TEU	102.5mt per day at normal speed; 104.4mt per day slow-steaming	75% and 25%
PBC56 and PBC57	Houston, New Orlens, Santos, Rio de Janiero, Cartagena, Veracruz, Kingston, Itajai	10.5 knots front haul, 12 knots back haul	5,770 TEU	75.2mt per day at normal speed; 89.6mt per day slow-steaming	50% and 50%

The bunker charge round voyage percentage weighting allocation, vessel speed and consumption used in the bunker charge calculations are arrived at by extensive market survey and reflect market practice. All assessments include a sea margin of 5%. The voyage durations are arrived at by extensive market survey and are basis vessels proceeding on a round voyage to ports in geographical rotation within the ranges in the ports in the table above. The container vessel speeds, vessel sizes, vessel bunker consumption used in the assessments are also in the table above. The container volume split allocation used in the assessments are listed in the table above.

Platts Bunker Excluded (PBX) container spot rate

The Platts Bunker Excluded (PBX) container spot rate assessments are calculated by deducting the daily values of bunker charge assessments from the container rate assessments for the above routes and are also on a $/FEU basis.

Platts Carbon Emissions Charges

Platts publishes ten daily carbon emission charges pertaining to inter-European Container trade routes on both head haul and back haul routes. The charges are assessed on a dollar per FEU ($/FEU) basis.

Platts Container Emission Charges (PCECs) reflect the costs in emissions to move a forty-foot equivalent unit on the specified route. PCECs consider 50% of carbon emissions for all inter-EU voyages and European Economic berths, whilst also adopting a volume allocation weightage to determine overall emissions costs on Front Haul and Back Haul voyages.

- PCEC1 North Asia to North Continent
- PCEC2 North Continent to North Asia
- PCEC9 North Continent to East Coast North America
- PCEC10 East Coast North America to North Continent
- PCEC15 North Continent to East Coast South America
- PCEC16 East Coast South America to North Continent
- PCEC17 Indian Subcontinent to North Continent
- PCEC18 North Continent to Indian Subcontinent
- PCEC35 Europe to West Coast Africa
- PCEC36 West Coast Africa to Europe

Platts also assesses four daily carbon emission charge assessments reflecting carbon emission costs incurred via the Cape of Good Hope.

- CEFH1 North Asia to North Continent
- CEFH2 North Continent to North Asia
- CEFH17 Indian Subcontinent to North Continent
- CEFH18 North Continent to Indian Subcontinent

Chemical freight

Platts petrochemical freight assessments are assessed daily and weekly, and reflect the transactable value of chartering a vessel at the following times:

Singapore 16:30 – Liquid chemical freight (daily, or Friday depending on routes), gas chemical freight (every Friday), polymer freight (every Wednesday)

London 16:30 – Liquid chemical freight & gas chemical freight (every Friday)

Houston 13:30 – Liquid chemical freight & gas chemical freight (every Friday)

Size and specifications: The tonnage specified in the Platts assessment tables represents the weight of the cargo carried. Platts may normalize freight rates for charters of a different size for assessment purposes, including pro-rating the market rate to the size of the cargo reflected in the assessment.

Timing: Assessments reflect prompt fixtures, according to prevailing regional market practices.

Liquid chemicals

Platts assesses spot market rates for the chartering of IMO type II and type III grade chemical tankers for the transportation of category Y and Z chemical cargoes, which includes products such as aromatics, solvents and MTBE. Liquid chemical freight assessments are typically based on epoxy-coated or stainless-steel purpose-built tankers. The assessments are published in US dollars/mt.

Location: Platts assesses a number of key shipping regions under broad geographic descriptions. A list of those descriptions and the markets they represent are as follows:

Middle East basis Red Sea: Rabigh, Yanbu (Saudi Arabia)

Middle East basis Arabian Gulf: Al Jubail (Saudi Arabia), Messai'eed(Qatar), Kuwait (Kuwait), Sohar (Oman), Salalah (Oman) and Jebel Ali (UAE)

East China: Zhangjiagang, Shanghai, Jiangyin, Nantong, Ningbo, Nanjing, Zhenjiang, Jiaxing

South China: Shenzhen, Shantou, Hong Kong, Xiamen and Zhuhai

India: Kandla, Mundra, Jawaharlal Nehru Port (JNPT) and Mumbai ports

Southeast Asia: Jakarta and Surabaya (Indonesia), Singapore, Manila Bay (the Philippines), Port Klang (Malaysia), Bangkok (Thailand), Ho Chi Minh City (Vietnam)

Taiwan: Kaohsiung, Keelung, Mailiao

South Korea: Onsan, Ulsan, Yeosu, Daesan,Incheon

© 2026 by S&P Global Inc. All rights reserved.

Gas chemicals

Platts assesses spot market rates for the chartering of gas tankers for the transportation of liquefied chemical gases such as ethylene, propylene and butadiene. Gas tankers are refrigerated and/or pressurized vessels depending on the product being transported. The weekly assessments are published in US dollars/mt every Friday.

Polymers

Platts assesses spot market freight rates for the transportation of the following resins: low density polyethylene, linear low density polyethylene, high density polyethylene, polypropylene and polyvinyl chloride on standardized intermodal containers. The assessments reflect 20-foot or 40-foot equivalent containers. The weekly assessments are published in US dollars/mt every Wednesday.

Platts routinely calibrates its polymer freight assessments against the daily Middle East -West Coast India container box rates. The Middle East to India polymer freight assessments are published in $/mt at the close of Asian trade at 16:30 Singapore time (0830 GMT), every Wednesday. Platts compares the pricing information received from market participants with its daily 16:30 India time (1100 GMT) container box rate assessments.

Location: Platts assesses a number of key shipping regions under broad geographic descriptions. A list of those descriptions and the markets they represent are as follows:

Middle East: Jebel Ali (UAE), Salalah (Oman)

East China: Zhangjiagang, Shanghai, Jiangyin, Nantong, Ningbo, Nanjing and Zhenjiang

South China: Shenzhen, Shantou, Hong Kong, Xiamen and Zhuhai

India: Kandla, Mundra, Jawaharlal Nehru Port (JNPT) and Mumbai ports

Southeast Asia: Jakarta and Surabaya (Indonesia), Singapore, Manila Bay (the Philippines), Port Klang (Malaysia), Bangkok (Thailand), Ho Chi Minh City (Vietnam)

Northwest Europe: Basis Antwerp port, deliveries to Rotterdam and Amsterdam will be normalized to the Antwerp port basis (polymers only)

Turkey: Istanbul and Mersin

US Gulf: Houston

Latin America: Main ports in Brazil and West Coast South America.

The following conversion factors to derive a $/mt freight rate for polymers are used:

Code	Assessment	MT in 1 container
PCR3400	Platts Container Rate 34 Middle East - West Coast India $/FEU	25 mt
TCR3400	Platts Container Rate 34 Middle East - West Coast India $/TEU	17 mt

Fertilizer Freight

Platts assess weekly spot market freight rates for the chartering of dry bulk/liquid/chemical vessels for the fertilizer sector.

Timing: Assessments reflect vessels loading up to 30 days forward from the date of the assessment.

Sulfuric acid freight assessments reflect vessels shipping cargo loading between two to four weeks forward.

Fertilizer dry bulk freight markets are assessed every Thursday on a timestamp considered most relevant to trading liquidity.

Sulfuric acid freight markets originating in EMEA are assessed every Wednesday on a 16:30 London timestamp.

Sulfuric acid freight markets originating in Asia are assessed every Wednesday on a 16:30 Penang timestamp.

Assessments are derived from source data gathered from market participants over the course of the trading week.

All assessments are reflected as a single number close value, with standardized high and low ranges $1/mt above (high) and below (low) the close value. Sulfuric acid freight is reflected as a single number close value.

Size and specifications: The tonnage specified in the Platts assessment tables represents the weight of the cargo carried. Platts may normalize freight rates for charters of a different size for assessment purposes, including pro-rating the market rate to the size of the cargo reflected in the assessment.

Location: Except where explicitly specified, Platts assesses a number of key shipping regions under broad geographic descriptions. Prices are assessed with a basis location (listed below), although other ports within the region may be normalized to this point where necessary:

US Gulf: Tampa

East Coast US: Fairless Hills

South China: Fangcheng

China River: Zhenjiang, Nantong

East China: Qingdao

East Coast India: Kakinada, Paradeep

West Coast India: Mundra

Middle East: Ruwais (UAE), Jubail (Saudi Arabia), Sur (Oman), Mesaieed (Qatar)

SE Asia: Koh Si Chang (Thailand)

Southeast Africa: Dar Es Salaam (Tanzania)

Baltic: Ust Luga, St Petersburg (Russia)

Black Sea: Poti, Batumi (Georgia)

Ammonia

Platts produces calculated daily spot market freight rates for the chartering of liquified petroleum gas (LPG) vessels for ammonia.

Timing: The assessments produced consider a variety of factors including latest spot input on time charter rates and bunker prices.

Size and specifications: The tonnage specified in the Platts assessment tables represents the volume of the cargo carried.

The freight rates for the following assessments reflect all the costs of a round voyage for a gas carrier involving European ports, which include EU Allowances (EUA) charges, in addition to the existing costs considered:

- Ammonia Freight Caribbean-Northwest Europe 25,000 mt (FACTB00)
- Ammonia Freight US Gulf-NWE 25,000 mt (FACTY00)
- Ammonia Freight Algeria-NWE 15,000 mt (FACTH00)
- Ammonia Freight Middle East-NWE 25,000 mt (FACTI00)
- Ammonia Freight EC Canada-NWE 25,000 mt (FACTW00)

The additional carbon costs are calculated based on distances travelled within and outside Emission Control Areas (ECA),

© 2026 by S&P Global Inc. All rights reserved.

estimated bunker consumption by fuel type for each area, and carbon conversion factors published in Annex 1 of Regulation (EU) 2015/757 of the European Parliament and of the Council on the monitoring, reporting and verification of CO2 emissions from maritime transport:

Area	Type of Fuel	CCF (mt-CO2/ mt -Fuel)
ECA	MGO	3.206 mt-CO2
Non-ECA	VLSFO	3.151 mt-CO2

In line with EU Directive 2023/959 of May 10, 2023, the freight rates reflect the costs to offset 50% of CO2 emissions for all inbound and outbound voyages between the EU and non-EU member states.

Revision history

July 2026: Platts completed an annual review of this guide, reviewing all content, correcting typos, and making edits to language throughout. Platts also updated the guide to reflect changes in ammonia freight. The guide has also been updated to reflect the launch of Red Sea- Far East VLCC dirty tanker freight assessment. The guide has also been updated to reflect the base ports used in Platts Container Rates and the new cement, clinker and SCMs freight assessments.

April 2026: The guide was updated to reflect the change from "carbon-accounted" to "carbon-inclusive" for dry bulk time charter equivalent assessments. Platts has also updated this guide to include the change of cargo size for Atlantic grain and petcoke Ultramax assessments to 55,000 mt from March 2, 2026.

March 2026: This guide was updated to reflect the launch of the Aframax Vancouver – China dirty tanker assessment; the launch of methanol base rates; launch of MOPAG jet fuel/kerosene, gasoil LR2 assessments along with gasoline LR1 assessment. The guide has also been updated to reflect the launch of MGC freight from Houston to Lome.

January 2026: This guide was updated to reflect the launch of Southeast Asia- West Coast India container assessments and the additional NVOCC transported West Coast India to Middle East container assessments. The guide was updated to reflect the launch of global dirty and clean tanker indices, launch of WAF – WAF/UKC/USAC/Med MR assessments, launch of Suezmax Guyana – UKC/Med, and the discontinuation of Dirty Aframax USGC-UKC derivative assessments. The updated guide also reflects the launch of new VLGC freight assessments; annual changes to bunker charges used in Platts Base Rates, to EUA charges and changes to Base Rates as a result of Med becoming an ECA region. The basket of routes used for Worldscale assessments have also been updated (provided as a link).

November 2025: This guide was updated to reflect the launch of the VLGC Freight USGC-East Africa and Suezmax Persian Gulf to West Coast India assessments. Platts also updated this guide to include the launch of long-term container freight rate assessments for the North-Asia – North Continent route and the launch of the Med-Black Sea Handysize Clean tanker assessment. The guide has also been updated to reflect the discontinuation of Suezmax Iran loading premium tanker freight assessments

September 2025: Platts updated this guide to include Persian Gulf-East Africa 90kt LR2 Wordscale and $/mt LR2 assessments; Baltic to West Coast India Aframax assessments; Black Sea to West Coast India Suezmax assessments; and Atlantic dry bulk period rate assessments. Platts also updated this guide to include one daily dry bulk implied grains freight assessment derived from the GSP-11 index (50kt Varna-Cigading) and a dry bulk Panamax grains freight assessment derived from the KMAX-9 index (60kt Chornomorsk-Cigading). The guide also reflects the change in cargo size and laycan for the Santos to Qingdao dry bulk freight assessment.

July 2025: Platts completed an annual review of this guide, reviewing all content, correcting typos, and making edits to language throughout. Platts also updated the guide to reflect changes in fertilizer freight.Platts also added in GSP 11 and GSP 11S Supramax weighted average indexes tables, the symbol codes of weighting (%) of the eleven key time charter equivalent assessments effective Dec. 2, 2024. Platts also updated the guide to include the restart of the grains route from Northwest Black Sea to Alexandria, Egypt, 25kt effective from May 1, 2025. The guide was also updated to reflect the change from "carbon-accounted" to "carbon-inclusive" base rates and dry freight. The guide was also updated to reflect the launch of carbon-inclusive LNG base rates.

January 2025: The guide has been updated to reflect the new Cape of Good Hope (COGH) outright assessments launched on December 9, 2024, and also reflects the discontinuation of COGH differentials on the same day. The guide has also been updated to include new Supramax Index and Suezmax Index launched December 2, 2024 and to remove Panama Canal charge assessments that have been discontinued. The guide also reflects the new methodology of including EU ETS costs in tanker freight and also the newly launched symbols for two carbon exclusive benchmarks that have been maintained. Platts updated this guide to modify the spelling of "sulfuric acid" from the "ph" to the "f" spelling in fertilizer freight. Symbols for all fertilizer freight have been added.

December 2024: Platts update this guide to include the change of cargo size of LR2 Persian Gulf-UKC and LR2 Persian Gulf-Mediterranean clean tanker assessments from 75,000 mt to 90,000 mt from Nov. 1, 2024.

October 2024: Platts updated this guide to include the launch of Clean Tanker ARA-Brazil 37kt assessment Sep. 2, 2024. Platts also updated the guide to reflect the change in assessment description for Capesize PC5 assessment and the change in methodology for Capesize and Panamax scrubber premium indexes effective Oct. 1, 2024. The updated guide also reflects the launch of Aframax 80,000 mt Vancouver-US West Coast assessment Oct. 1, 2024. Platts also updated this guide to reflect change in weightages and routes of the Platts Container Index effective Oct. 1, 2024. This guide was also updated to include the launch of 10 daily bunker charge (PBCs) assessments complementing existing PBCs, to calculate bunker costs for key routes via the Cape of Good Hope (COGH). Platts also launched four daily carbon emission charge assessments reflecting carbon emission costs incurred via the Cape of Good Hope effective Sept. 2, 2024.

August 2024: Platts updated this guide to include the launch of 42 clean tanker and 38 dirty tanker carbon-accounted assessments launched July 1, 2024. Platts also updated the route description on the 270,000 mt Brazil-China assessment to exclude Uruguay.

© 2026 by S&P Global Inc. All rights reserved.

June 2024: Platts completed an annual review of this guide, reviewing all content, correcting typos, and making edits to language throughout.

Platts updated this guide to reflect the change of its Aframax Dirty Arab Gulf – Red Sea assessment from worldscale to a lumpsum basis effective April 1, 2024 and also discontinuation of its Suezmax Dirty Arab Gulf-Red Sea assessment effective May 2, 2024.

Platts also updated this guide to include the launch of VLCC TCE assessments along with the VLCC Index launched March 1, 2024. Guide also reflects new Cape of Good Hope Differentials, launched on April 1, 2024.

Further, the guide is updated to include new fertilizer freight assessments. The guide also reflects the change in frequency of Ammonia freight assessments. These changes were made in May 2024. Change in frequency and timestamp of chemical freight assessments has also been reflected. Specifications for Platts Base Rates have also been detailed further.

April 2024: This guide has been updated to reflect the change in ourcarbon-accounted tanker freight assessments on six Aframax routes from calculated assessments to spot fixtures, bids and offers inclusive of EU ETS costs effective March 1,2024.

February 2024: This guide has been updated to reflect three KMAX 9 derived Panamax dry freight assessments and carbon-accounted dry bulk freight assessments along with standalone carbon emission charges launched Dec. 1 2023. A new section has been added to the guide incorporating fertilizer freight. For containers, all Platts Bunker Charge assumptions have been revised after an extensive analysis on operational trends of container shipping flows along with vessel assumptions to reflect modern data sets. . The guide has also been updated to adjust Platts Carbon Emissions Charges to reflect 50% of emissions. In addition, Platts Container Rates feature new included and excluded costs in the table to reflect typical added costs from carriers. Platts Container Rates 41 and 42 are now recognized as Platts Container Rates 56 and 57 as part of a renumeration in December 2023. The timestamp for Platts Asia container rates has been updated to reflect the MOC time of 16:30 India time, effective 4 March 2024.

January 2024: Platts updated this guide to include the Nov. 1, 2023 launch of two daily spot-equivalent 38,000 mt Medium Range clean tanker Jones Act freight assessments on the US Gulf Coast-to-Tampa/Port Everglades routes and and MR clean tanker Jones Act term charter rate. The guide was also updated to reflect amended assessment methodology for the daily carbon-accounted Aframax dirty tanker 80kt UKC-UKC and 70kt USGC-UKC routes. This guide was also updated to reflect the November 2023 launch of AUI 6 and AUI 6S Ultramax weighted average indexes as well as Platts Dry Index for non-scrubber-fitted as well as scrubber-fitted indexes. The guide now also reflects Platts Base Rates launched in 2023.

October 2023: Platts updated this guide to include the Sep. 1, 2023 launch of twelve carbon emission charges pertaining to inter- and intra-European Aframax routes and to reflect the cargo size change from 150,000 mt to 145,000 mt on the Suezmax Caribbean-to-US Gulf Coast route. The guide was also updated to reflect newly launched Platts Container Rate assessments from Asia to India & Australia as well as two LR2 clean tanker assessments for Red Sea-UKC/Med .

June 2023: Platts completed an annual review of this guide, reviewing all content, correcting typos, and making edits to language throughout. Platts updated this guide to include a methodology change for its carbon-accounted Aframax freight assessments to reflect the parameters set out in the final European Parliament Environmental Committee compromise text from Feb. 9, 2023.

Platts also updated this guide to include new Platts Carbon Emissions Charges – daily indications to reflect the additional cost on a dollar-per-FEU basis to offset tank-to-wake carbon dioxide emissions through the European Union's Emissions Trading System - on 10 container market routes, launched in March 2023.

Further, the guide is updated to include new container rate and bunker excluded assessments from East Coast South America to US Gulf Coast, and the equivalent back-haul route. These assessments were launched on May 15, 2023.

The guide was also updated to reflect the launch of ASI 6 and ASI 6S Supramax weighted average indices, change in dry bulk index weightages for Capesize-linked Cape T4, Kamsarmax-linked KMAX 9, Ultramax-linked APUI 5 and Supramax-linked APSI 5 for non-scrubber as well as scrubber-fitted indexes from June 1, 2023. The weightages for the LNG-fueled Newcastlemax-linked NMAX GT5 index have been revised as well. Also the guide reflects the revision of the speed and consumption specifications of dry bulk Panamax vessels from June 1, 2023.

April 2023: Platts updated this guide to reflect the April 3 launch of the dirty tanker VLCC 270kt US Gulf Coast-to-UK Continent and VLCC 270kt US Gulf Coast-to-Mediterranean spot freight assessments.

December 2022: Platts updated this guide to include two Supramax dry bulk time charter equivalents, reflecting shipments of petcoke from the US Gulf Coast to the Mediterranean and ferrous scrap from the North Sea to the Mediterranean. The launched TCE assessments reflect the $/day pricing on these two routes, derived from the respective $/mt Supramax voyage rates that Platts already publishes, the Rotterdam Netherlands -Aliaga Turkey 40kt scrap and the New Orleans Louisiana-Iskenderun Turkey 50kt petcoke freight assessments. Platts also updated this guide to include a new Panamax limestone assessment. Platts also updated this guide to include the cargo size change of its Persian Gulf to Japan VLCC freight assessment to 270,000 mt. Further, Platts added methodology specifications for its US Gulf Coast Aframax lumpsum lightering assessments to this guide.

© 2026 by S&P Global Inc. All rights reserved.

November 2022: Platts updated this guide to clarify that the UK Continent region reflected in its tanker freight assessments extends from all ports west of Gibraltar to Hamburg, plus southern Sweden and western Norway. Platts typically views the Oresund Bridge, joining Denmark and Sweden, as the eastern extent of this range. This update also incorporates a change in cargo size on the Suezmax cross-Caribbean assessment from 150,000 mt to 145,000 mt. Further Platts updated this guide to Include the launches of four carbon accounted Aframax freight assessments on the 70,000 mt USGC-UKC/Mediterrean routes and two 130,000 mt Suezmax assessments on the Brazil-UK Continent/Mediterranean routes. Platts also updated this guide to reflect the discontinuation of the following clean tanker assessments: Arab Gulf-USWC 30kt MR Lumpsum, Red Sea-USWC 35kt MR Lumpsum, Red Sea-USAC/GC 35kt MR Lumpsum, Arab Gulf-USAC/GC 30kt MR Lumpsum, Red Sea-India 35kt MR Worldscale, Singapore-India 55kt LR Lumpsum, Singapore-Hong Kong 55kt LR Lumpsum, Singapore-Japan 55kt LR Worldscale and Singapore-South Korea 55kt LR Worldscale.

October 2022: Platts updated this guide to reflect the launch of four carbon-accounted Aframax tanker freight assessments.

July 2022: Platts completed an annual review of this guide, reviewing all content, correcting typos, and making edits to language throughout.

May 2022: Platts updated this guide to include new container rate, bunker charge, and bunker excluded assessments from Indian Subcontinent to East Coast North America, launched on April 1, 2022.

March 2022: Platts updated this guide to reflect the discontinuation of the clean tanker 38,000 mt East Coast Canada-to-US Atlantic Coast assessments. The guide has been updated to reflect the launch of six time charter equivalent (TCE) assessments for 209,000 dwt Newcastlemax class dry bulk ships using LNG as bunker fuel on six key routes and a ton-mile weighted average index named NMAX GT4 on Feb. 3, 2022. This update also incorporates several changes into its weekly Middle East to India polymer freight assessments effective Feb. 9, 2022.They include changes to the load and discharge ports, as well as calibration of the assessments against relevant container rates.

December 2021: Platts clarified its global dry bulk dollar per metric ton voyage charter assessments to reflect load/discharge and turn time rates that are typical at each port and these variables are also used in the corresponding TCE assessments. Platts updated this guide to reflect the launch of APUI 5 and APUI 5S Ultramax weighted average indices, the new Newcastle, Australia to Campha, Vietnam, Samarinda, Indonesia to Guangzhou, China and Mina Saqr, UAE to Paradip, India Ultramax TCE assessments plus the amended cargo sizes for the East Kalimantan, Indonesia to Guangzhou, China, and Richards Bay, South Africa to Port Qasim, Pakistan to 55,000 mt (plus/minus 10%) assessments, from 50,000 mt (plus/minus 10%) on November 1, 2021. Platts also updated this guide to reflect the launch of four daily spot container freight box rate assessments for the West Coast India to Middle East trade lane and five Aframax 70,000 mt US Gulf Coast-to-UK Continent freight derivative assessments. Platts also updated this guide to reflect the launch of two 60,000 mt ARA-Persian Gulf and Mediterranean-Persian Gulf LR1 clean tanker assessments.

October 2021: Platts updated this guide to reflect the discontinuation of the clean tanker 38,000 mt Caribbean-to-US Gulf Coast and the dirty tanker 150,000 mt Caribbean-to-US Atlantic Coast assessments.

September 2021: Platts updated this guide to reflect the launch of four Southeast Asia-North America fronthaul, backhaul container PBX rates as well as two headhaul and two backhaul container box rate assessments on the North Asia-to-East Coast South America and North Asia-to-West Coast South America routes plus the four associated headhaul and backhaul Platts Bunker Excluded (PBX) container rates; and added the Santos, Brazil to Cigading, Indonesia, 50kt derived sugar dry bulk freight assessment

August 2021: Platts updated this guide to reflect the launch of the Clean Medium Range US Gulf Coast-West Coast Central America freight assessments.

July 2021: Platts completed an annual review of the global freight specifications guide. Platts reviewed all content, corrected typos and made minor edits to language.

Platts redefined the US Atlantic Coast and Caribbean region descriptions; added West Coast Central America region and expanded the range of Americas demurrage assessments.

Platts also clarified the UKC range for dirty tanker assessments and updated the guide to include three new implied calculated freight rates for Supramax dry bulk routes for thermal coal shipments that are derived from existing Time Charter Equivalent (TCE) assessments, effective July 1. Platts also updated the laycans for coal, alumina, bauxite and sugar freight assessments. S&P Global Platts has also discontinued the publication of all four Euro-denominated price equivalents of its Panamax thermal coal freight rates from July 1, 2021.

May 2021: Platts updated this guide to reflect the update of port baskets used in the dollar per metric ton calculations for its India-Singapore, India-Japan and India-South Korea MR clean tanker assessments to fully reflect loadings from West Coast India ports and deliveries into South Korean ports, and renamed these assessments from MR and LR clean tanker Arab Gulf-India and Red Sea-India assessments to Arab Gulf-West Coast India and Red Sea-West Coast India from April 1, 2021. The guide was also updated to reflect the change in Platts clean MR tanker freight rate assessments for four voyages from the Persian Gulf, Red Sea and West Coast India to East Africa and South Africa to an all-inclusive basis that incorporates security costs, effective April 1, 2021. Further, this update reflects four new dirty tanker demurrage assessments in the Americas from May 3, 2021, i.e.

© 2026 by S&P Global Inc. All rights reserved.

Brazil-China VLCC, USGC-China VLCC, USGC Suezmax and USGC Aframax. For box rates, the guide was updated to include four new Southeast Asia to North America, backhaul container freight assessments from March 1, 2021, two new Americas container bunker charge assessments from April 1, 2021, and four new Europe-West Coast Africa, North Asia-East Coast Africa, backhaul container bunker charge assessments from May 3, 2021.

April 2021: Platts updated this guide to reflect the launch of Aframax TCEs for the Ceyhan-Mediterranean, Black Sea-Mediterranean, UKC-UKC, and Baltic-UKC Continent routes. Platts has also updated the Turkish strait delays methodology and will now only reflect transit delays, rather than full transit time. In addition, Platts will publish Turkish straits delays in half-day increments. Platts has also updated the methodology for the West Africa-to-West Coast India and West Africa-to-East Coast India VLCCs assessments, which will be normalized to reflect a dual port loading basis of Bonny, Nigeria and Dalia, Angola.

February 2021: Platts updated this guide to reflect the launch of LPG Med-Morocco coaster freight and two new Aframax cross-Mediterranean assessments from Libya and Sidi Kerir. Platts is also changing the name of the Mediterranean-Mediterranean Aframax assessment to Ceyhan-Mediterranean. Platts also updated this guide to reflect the launch of six container bunker cost assessments, PBC27 North Asia-to-Australasia, PBC28 Australasia-to-North Asia, PBC29 North Asia-to-West Coast South America, PBC30 West Coast South America-to-North Asia, PBC31 North Asia-to-East Coast South America and PBC32 East Coast South America-to-North Asia. The guide was also updated to reflect the launch of APSI 5 and APSI 5S Supramax weighted average indices, and the new Newcastle, Australia to Campha, Vietnam, Supramax voyage, TCE assessments on February 1, 2021.

January 2021: Platts updated this guide to reflect the discontinuation of the FOB Arab Gulf jet fuel/kerosene, gasoil 80,000 mt netback freight rates, the PC12 Hampton Roads, US East Coast to Qingdao, North China Capesize thermal coal freight and the PC4 Richards Bay, South Africa to Rotterdam Capesize thermal coal freight assessments from January 4, 2021. Typographical errors in the cargo size of the DBF South Kalimantan Indonesia-Paradip India Supramax, DBF South Kalimantan Indonesia-Navlakhi India Supramax, DBF Richards Bay South Africa-Paradip India Supramax and DBF Richards Bay South Africa-Navlakhi India Supramax TCE routes were corrected in the table. The guide was also updated to reflect the change in the time stamp reflected in six Americas-linked container box rate assessments to 1:30 pm Houston time, effective January 4, 2021.

December 2020: Platts updated this guide to remove some previously-discontinued symbols from the West of Suez tanker table missed in previous versions.

November 2020: Platts updated this guide to include the PC23 Capesize Newcastle, Australia-Zhoushan, China basis 130,000 mt (plus/minus 10%) dry bulk assessment for thermal coal cargoes, and the PC24 Capesize Seven Islands, east coast Canada-Qingdao, East China basis 170,000 mt (plus/minus 10%) dry bulk assessment for iron ore shipments launched November 2, 2020. On Supramax dry bulk, the PS32 Recalada, Argentina-Bejaia, Algeria basis 40,000 mt (plus/minus 10%) grains assessment, and a pair of scrubber-fitted and 0.5% marine fuel time charter equivalents based on that assessment, were added. The guide was also updated to include Aframax demurrage rates on the UKC-UKC and Mediterranean-Mediterranean, 80,000 mt routes, as well as the Suezmax West Africa-UKC, 130,000 mt route. Adds Houston-Morocco VLGC implied freight rate.

October 2020: Platts updated this guide to remove one clean tanker 55kt Mediterranean-South America duplicate symbol; to remove the following discontinued dirty tanker assessments: 260kt Mediterranean-UKC, Mediterranean-Mediterranean, West Africa-Mediterranean, West Africa-EC Canada and West Africa-Caribs; 135kt UKC-UKC, UKC-Mediterranean, UKC-Caribs and Mediterranean-EC Canada; 130kt West Africa-Caribs; and 55kt UKC-Mediterranean. In the Americas, the guide was updated to reflect the launch of the Clean Demurrage MR USGC assessment.

August 2020: Platts updated this guide to include two newly launched Kamsarmax 60,000 mt (plus/minus 10%) grains dry bulk freight assessments from the Black Sea and Argentina to China and two crude oil dirty tanker lumpsum Suezmax assessments from the Black Sea to the Far East and Mediterranean to Far East.

July 2020: Platts completed an annual review of the global freight specifications guide. Platts reviewed all content, corrected typos and made minor edits to language. Platts updated the guide to include the new five implied calculated freight rates for Capesize, Panamax and Supramax dry bulk routes for grains and coal shipments that are derived from existing Time Charter Equivalent (TCE) assessments, effective June 1. The dry bulk tables were updated to include laycans for the freight assessments. Platts made changes to tanker cargo sizes in line with most recent updates. In the Americas, Platts updated the table to include the new USGC Aframax overtime lightering assessment on June 1, 2020.

May 2020: Platts updated this guide to include the new Middle East-East China liquid petrochemical freight assessment for 5,000-7,000 mt cargoes launched December 13, 2019. The guide was also updated to include the new daily weighted average Kamsarmax TCE index (KMAX 9) basis 0.5% sulfur bunker fuel and scrubber fitted ships launched May 4, 2020, as well as the new PC20 Capesize assessment for the Kamsar, Guinea to Yantai, China route basis 170,000 mt (+/- 10%) cargo size and the new PS30 Supramax assessment for the Samarinda, East Kalimantan to Campha, Vietnam route, basis 50,000 mt (+/- 10%) cargo size launched May 4, 2020. Platts also updated the guide to include the new US Gulf-China 66kt dry bulk time charter equivalent assessment launched March 2, 2020 and the floating freshwater surcharge implemented by the Panama Canal Authority (PCA) on February 16, 2020.

© 2026 by S&P Global Inc. All rights reserved.

January 2020: Platts updated this guide to include a West of Suez-Americas Aframax laycan of 5-20 days forward in table 'Tanker Sizes & Laycans'.

January 2020: Platts updated this guide to remove the discontinued European Clean Tanker barge assessments as well as the following discontinued dirty tanker assessments: 90kt Caribbean-Med; 90kt Caribbean-UKC; 150kt Caribbean-China; and 150kt USGC-Singapore. Turkish Strait transit time language, which was clarified in June, has been updated. Some clarification around IMO 2020 rates was added. In the table, cargo sizes for dirty tanker Caribbean-Med and Caribbean-UKC assessments have been updated to 145kt, while cargo sizes for Caribbean-Caribbean, Caribbean–USAC and Caribbean-USGC assessments have been updated to 150kt.

November 2019: Platts updated this guide to include the new 10-day rolling freight average of its existing Dirty Cross-UK Continent 80 kt assessment which was launched September 2, 2019. This guide was also updated to include the CapeT4 Index, which was launched on October 1, 2019. Platts also updated this guide to include two newly launched Americas clean Long Range 1 tanker freight assessments: 60kt USGC-Brazil and 60kt USGC-North Brazil. This guide was also updated with the newly launched dry bulk Time Charter Equivalent (TCE) assessments basis 0.5% sulfur marine fuel and individual scrubber premium indexes for Capesize, Panamax, Ultramax and Supramax class ships globally. Bunker consumption rates for non-scrubber and scrubber fitted vessels were also updated. Typos in the 'Polymers' table were corrected to reflect the correct cargo sizes. Twelve newly launched container bunker charge assessments were added to the guide. These are North Continent-ECSA, Indian Subcontinent-North Continent, Indian Subcontinent-North Asia, ECSA-ECNA, Southeast Asia-WCNA, Southeast Asia-ECNA, ECSA-North Continent, North Continent-Indian Subcontinent, North Asia-Indian Subcontinent, ECNA-ECSA, WCNA-Southeast Asia and ECNA-Southeast Asia. The bunker charge text was also updated to reflect 0.5% sulfur marine fuel bunker prices in place of IFO380 fuels, from November 1, 2019. Representative ports, vessel speed and consumption were also updated.

August 2019: Platts completed an annual review of the global freight specifications guide. Platts reviewed all content, corrected typos and made minor edits to language. In this update, all of the LPG freight methodology globally was incorporated into this guide, from the regional oil specification guides. The Asia petrochemical freight section was updated to reflect changes to the frequency of assessments for several routes, addition of new aromatics freight routes and the discontinuation of a few routes. The dry bulk TCEs table was updated to include the new Capesize Hay Point-Rotterdam backhaul TCE daily assessment that was launched on May 2, 2019, as well as the new Supramax Santos-Qingdao and Supramax Yuzhny-Cigading daily TCE assessments launched on July 1, 2019. The turn-time at Load/Discharge Port for Supramax New Orleans-Kashima TCE assessments was corrected to 30/60 hours, while the assessment description of Panamax Hampton Roads Virginia-Rotterdam TCE was corrected to DOP Gibraltar. The thermal coal table was updated to reflect the replacement of Karachi port with Port Qasim as the discharge port for the Richards Bay, South Africa, to Pakistan 50,000 mt Supramax thermal coal freight assessment, effective August 1, 2018. Additionally, the Iron ore, Thermal coal, Metallurgical coal, petcoke and scrap, Alumina and bauxite, and Sugar and grains tables were updated to reflect the ten dry freight Panamax routes discontinued on July 1, 2019. The West of Suez Tankers – Americas (Dirty) table was updated to include the new Worldscale 145kt Suezmax USGC-UK Continent/Mediterranean and Lumpsum USGC Aframax Lightering assessments that were launched April 1 and June 3, respectively. In April, Platts completed an annual update to sections 1 to 6 of Platts Methodology and Specifications guides, and moved these sections into a standalone Platts Methodology Guide.

March 2019: Platts updated this guide to include two newly launched dry bulk grains freight assessments: 50kt Ukraine-Indonesia and 50kt Brazil to north China.

November 2018: Platts completed an annual review of the global Freight methodology and specifications guide. Platts reviewed all content, corrected typos and made minor edits to language. Platts also added a new section I to VI, and incorporated all of the petrochemical freight assessment methodology into this guide from the regional petrochemical guides. Platts also incorporated its chemical tanker freight assessment methodology into this guide. This guide was also updated to reflect the newly launched 260 kt Brazil/Uruguay-China dirty oil tanker assessment and the newly launched 100kt Russia-North China dirty oil tanker assessment. Platts also updated this guide to include the newly launched Panamax 75kt dry bulk steam coal EC Australia-Japan implied freight assessment, the newly launched 30kt UKC-UKC clean tanker assessment and the newly launched WC Canada-N China Panamax 75kt dry bulk TCE assessment. References to the following discontinued dry bulk freight assessments have been removed: Panamax NE Australia-UAE; Supramax S Africa-Mundra, WC India along with the following differentials: from basis Mundra to Dahej, WC India; from basis Mundra to Kandla, WC India; from basis Krishnapatnam to Paradip, EC India; from basis Krishnapatnam to Ennore, EC India; from basis Krishnapatnam to Paradip, EC India; and from basis Krishnapatnam to Ennore, EC India. References to the discontinued Supramax Indonesia-Mundra, WC India dry bulk freight assessment were also removed, along with the following differentials: from basis Mundra to Dahej, WC India; and from basis Mundra to Kandla, WC India. Platts also updated this guide with changes to some basis ports for dry bulk freight assessments. The differential for 55kt S Africa-WC India has changed from basis Mundra to New Mangalore, WC India to a differential from basis Kandla to New Mangalore, WC India. The differential for 55kt Indonesia-WC India has changed from basis Mundra to New Mangalore, WC India to a differential from basis Navlakhi to New Mangalore, WC India. Platts also updated this guide with changes to the load and discharge rates in its dry bulk sugar freight assessments. The load/discharge rates on the Santos SE Brazil-Rizhao, N China 50kt route have been changed from 8,000/3,000 mt/day to 10,000/7,000 mt/day. The load/discharge rates on the Laem Chabang, Thailand,

© 2026 by S&P Global Inc. All rights reserved.

to Ciwandan, Indonesia 25kt route have been changed from 3,000/3,000 mt/day to 6,000/6000 mt/day. Platts also updated this guide to include the newly launched container bunker charge assessments and bunker excluded container spot rate assessments for North Continent-EC North America and EC North America-North Continent.

May 2018: Platts updated this guide to include the newly launched container bunker charge assessments and bunker excluded container spot rate assessments. Platts also changed references in the container freight assessment descriptions from 'UK Continent' to 'North Continent', and removed references to the discontinued UK Continent-Mediterranean and Mediterranean-UK Continent container freight assessments. Platts updated this guide with a change to the description of the US-Turkey Supramax petcoke dry bulk freight rate assessment from Houston-Aliaga to New Orleans-Iskenderun. Platts also changed the cargo size for its New Orleans-Qingdao and New Orleans-Fangcheng dry bulk grain freight assessments from 60kt to 66kt.

April 2018: Platts updated this guide to include polyvinylchloride in the Polymers and liquid chemicals assessments and corrects the spelling of Malaysian port Klang from Kelang.

April 2018: Platts updated this guide with a change in cargo size for the Suezmax dirty tanker Persian Gulf-USGC, Persian Gulf-UKC and Persian Gulf-Mediterranean assessments from 130kt to 140kt. Platts also updated this guide to include the newly launched 35kt Singapore-Australia clean tanker assessment. Platts also removed references to the discontinued dry bulk 50kt USGC-Egypt grains freight assessment.

March 2018: Platts updated this guide to include seven newly launched dry bulk time charter equivalent assessments: 70kt USEC-Rotterdam; 60kt Brazil-China (delivery Gibraltar); 60kt Brazil-China (delivery Singapore); 50kt USGC-Japan (delivery Southwest Pass); 50kt USGC-Japan (delivery Gibraltar); 50kt USGC-EC India (delivery Southwest Pass); and USGC-EC India (delivery Gibraltar). Platts also updated this guide to include four newly launched dirty tanker assessments: 270kt USGC-China; 270kt USGC-Singapore; 70kt USGC-UK Continent; and 70kt USGC-Mediterranean.

February 2018: Platts updated this guide with a change in cargo size for the Long Range 1 clean tanker US Gulf Coast-Japan/South Korea assessment from 55,000 mt to 60,000 mt.

January 2018: Platts updated this guide to include four newly launched 55kt Ultramax dry bulk time charter equivalent assessments into India: Indonesia-Paradip; Indonesia-Navlakhi; South Africa-Paradip; and South Africa-Kandla. Platts also updated this guide with changes to Supramax dry bulk thermal coal cargo sizes into India to 55kt.

December 2017: Platts updated this guide to include three newly launched dry bulk freight assessments: 55kt South Africa-WC India thermal coal; 50kt South Africa-Pakistan thermal coal; 85kt Australia-China metallurgical coal. Platts also updated this guide with a change to the description and cargo size for the Thailand to Indonesia dry bulk sugar freight assessment from a 40,000 mt Handymax stem to a 25,000 mt Handysize stem, and a change to the description and cargo size for the Rotterdam to Turkey dry bulk scrap freight assessment from a 25,000 mt Handysize stem to a 30,000 mt Supramax stem. Platts also updated this guide to include the newly launched container freight assessments for North Asia-UK, North Asia-WC North America, UK-North Asia and WC North America-North Asia. Platts also amended the descriptions for two existing container freight assessments, from North Asia to UK Continent to North Asia to North Continent and from UK Continent to North Asia to North Continent to North Asia.

November 2017: Platts updated this guide to remove references to the following discontinued sugar freight assessments: bagged 20kt Thailand-Kenya, bagged 20kt Southeast Brazil-Ghana, bulk 20kt Southeast Brazil-Russia, bulk 20kt Guatemala-China, bulk 50kt Southeast Brazil-UAE, bulk 20kt Guatemala-South Korea and bulk 40kt Thailand-South Korea.

October 2017: Platts updated this guide with a change in cargo size for two dry bulk Supramax steel scrap freight assessments, from New Jersey to Aliaga, Turkey and from Rotterdam to Aliaga, from 45,000 mt to 40,000 mt (plus/minus 10%).

September 2017: Platts updated this guide to include the newly launched 35kt clean tanker South Korea-Australia assessment. Platts also removed references to the discontinued dry bulk 40kt Handymax iron ore freight assessments for West Coast India-North China and East Coast India-North China.

July 2017: Annual review: Platts completed an annual update to the Global Freight Methodology Guide in July 2017. In this update, Platts reviewed all content and updated some language for clarity.

July 2017: Platts updated this guide to include descriptions and details of the newly launched FEU container freight rate assessments for North Asia-UK Continent, North Asia-Mediterranean, North Asia-EC North America, UKC-Med, UKC-ECNA, UKC-North Asia, Med-North Asia, ECNA-North Asia, Med-UKC, ECNA-UKC and the Platts Container Index. Platts also amended the delivery basis for the Supramax TCE East Kalimantan to Guangzhou assessment from Singapore to South China, and amended the bunkering port for this assessment from Singapore to Hong Kong, following a period of industry consultation and feedback.

April 2017: Platts updated this guide to include the newly launched 70kt dirty tanker USGC-EC Canada assessment. Platts also updated the guide with the newly launched dry bulk $/mt and time charter equivalent (TCE) freight assessments for 65kt and 50kt thermal coal Indonesia-China. Vessel deadweight specifications for the TCE assessments were also added to the guide.

February 2017: Platts updated this guide to include details of bunker and marine gasoil consumption, vessel speeds and port costs used in calculating dry bulk time charter equivalent

© 2026 by S&P Global Inc. All rights reserved.

assessments. Platts has also updated the fixing windows for the East of Suez, EMEA and Americas tanker markets following an extensive consultation with market participants.

January 2017: Platts updated this guide to include the following newly launched dry bulk time charter equivalent assessments: 170kt Western Australia-China, 170kt South Africa-China, 170kt Brazil-China Pacific Round Voyage, 170kt Brazil-China fronthaul, 150kt Colombia-Rotterdam, 75kt Indonesia-EC India, 75kt Indonesia-WC India, 75kt South Africa-EC India, 75kt South Africa-WC India, 75kt Eastern Australia-EC India, 75kt Eastern Australia-China, 50kt Indonesia-EC India, 50kt Indonesia-WC India, 50kt South Africa-EC India, 50kt South Africa-WC India, 50kt UAE-EC India. Platts also removed references to the discontinued dirty tanker 100kt Baltic-UK Continent ice premium assessment. Platts also changed the name of its dirty tanker 270kt UK Continent-Singapore assessment to 'Rotterdam-Singapore'.

November 2016: Platts updated this guide to include the following newly launched dry bulk Panamax bauxite freight assessments: 60kt West Africa-North China and 60kt Brazil-North China. Platts also updated this guide with a change to the cargo size for dry bulk Capesize thermal coal freight from 150kt to 130kt.

September 2016: Platts updated this guide to include the following newly launched dirty tankers assessments: 270kt Hound Point-Far East, 260kt West Africa-West Coast India, 260kt West Africa-East Coast India, 130kt West Africa-South Africa. Platts also added the following newly launched dry bulk Supramax thermal coal freight assessments: 50kt South Africa-WC India; 50kt South Africa-EC India; 50kt South Kalimantan, Indonesia-WC India; 50kt South Kalimantan, Indonesia-EC India; differential from basis South Kalimantan to East Kalimantan. Platts also removed references to the following discontinued dry bulk freight assessments: thermal coal 150kt Newcastle-Rotterdam and Gladstone-Rotterdam; thermal coal 75kt Gladstone-Rotterdam, Gladstone-Iskenderun and Newcastle-Rotterdam; metallurgical coal 70kt Roberts Bank-Rotterdam and Hampton Roads-Qingdao.

August 2016: Annual review: Platts completed an annual update to the Global Freight Methodology Guide in July 2016. In this update, Platts reviewed all content and updated some language for clarity.

June 2016: Platts updated this guide to include the following newly launched freight assessments: clean 38kt and 55kt tankers USGC-NE Asia; 75kt metallurgical coal dry bulk WC Canada-EC India; and 50kt limestone dry bulk Persian Gulf-India.

April 2016: Platts updated this guide to include the following newly launched freight assessments: 4kt fuel oil barges Rotterdam-Rotterdam, 4kt fuel oil barges Rotterdam-Antwerp and 160kt metallurgical coal dry bulk East Australia-Rotterdam.

February 2016: Platts updated this guide to include the following newly launched freight assessments: 59kt bauxite dry bulk Guinea-Spain, clean 80kt tankers Med-Japan and clean 80kt tankers Med-South Korea. Platts also removed references to the following discontinued assessments: dirty 260kt tankers Med-USAC, dirty 260kt tankers Med-USGC, dirty 260kt tankers Med-EC Canada, dirty 270kt tankers UKC-USAC, dirty 270kt tankers UKC-USGC, and dirty 270kt tankers UKC-EC Canada. Platts also updated this guide to include a clarification of its Dirty Demurrage FOB Singapore assessment. Platts also updated its explanation of the treatment of the value of spot fixtures in the clean and dirty tanker markets which are used in its assessments, when those spot fixtures include ECA (Emission Control Area) charges based on the use of 0.1% sulfur fuels in the Baltic and North Sea, with the previous normalization no longer required.

November 2015: Platts updated this guide to include the following newly launched dirty tanker assessments: 150kt Caribbean-China and USGC-Singapore; 140 kt Caribbean-Caribbean; 130kt Caribbean-China and USGC-Singapore; 90kt Caribbean-UKC and Caribbean-Med; 70 kt Caribbean-UKC, Caribbean-Med, EC Mexico-UKC, EC Mexico-Med and EC Mexico-USGC; and 50kt EC Mexico-USGC.

October 2015: Platts updated this guide to include newly launched 35kt clean tanker assessments for Arab Gulf-South Africa and West Coast India-South Africa, as well as newly launched 40kt clean tanker assessments for Baltic-UKC.

September 2015: Platts updated this guide to include newly launched 38kt clean tanker assessments for USGC-EC Mexico, USGC-Chile, USGC-Peru, USGC-Ecuador, USGC-Caribbean and EC Canada-USAC.

August 2015: Platts completed an annual update to the Global Freight Methodology Guide in August 2015. In this update, Platts reviewed all content, including adding further detail on shipping regions.

June 2015: Platts updated this guide with a change to the description for West of Suez clean demurrage from 'Clean Demurrage FOB Europe MR' to 'Clean MR Demurrage UK Continent - US Atlantic Coast'. The description of the ice premium for dirty Aframax vessels West of Suez has also been changed, from 'Primorsk-UKC' to 'Baltic-UKC'.

June 2015: Platts updated this guide to include new petcoke dry bulk assessments for US Gulf Coast-EC India and US Gulf Coast-N China.

May 2015: Platts updated this guide to reflect the change in the Market on Close assessment timing for the West of Suez (Americas) clean and dirty tanker assessments to 2:15 pm Houston time from 4:30 pm London time effective May 15, 2015.

April 2015: Platts updated this guide with the removal of references to the following discontinued assessments: clean 30kt tankers UKC-South America, clean 60kt tankers UKC-UKC, clean 60kt tankers UKC-Med, clean 30kt tankers Med-South America, clean 30kt tankers Black Sea-South America, and clean 38kt tankers Caribbean-South America.

© 2026 by S&P Global Inc. All rights reserved.

March 2015: Platts updated this guide with changes to some dry bulk freight rate assessment cargo sizes, including Panamax iron ore WC India-Qingdao; Panamax coal Australia-Turkey, Australia-Rotterdam, Australia-China, Australia-India, Indonesia-India, South Africa-India, Canada-Japan, Canada-Rotterdam and Canada-China; Capesize iron ore Australia-China, South Africa-China and Capesize coal US-China. The assessment tables were also updated with other, previously omitted cargo sizes and symbols for monthly averages.

March 2015: Platts updated this guide by clarifying the normalization of the value of spot fixtures in the clean and dirty tanker markets which are used in its assessments, when those spot fixtures include ECA (Emission Control Area) charges based on the use of 0.1% sulfur fuels in the Baltic and North Sea.

February 2015: This methodology guide was updated to include further description of Platts' processes and practices in survey assessment environments.

February 2015: Platts updated this guide by changing the size of clean tanker assessments for Mediterranean-US Atlantic Coast and Mediterranean-US Gulf Coast from 33kt to 37kt.

November 2014: Platts updated this guide by changing the timing of sugar freight assessments from 1630 to 1730 Singapore time, to bring these in line with the other dry bulk assessments. Platts also made minor updates to descriptions in Sections One through Six to include references to metals and other dry bulk materials. Platts added new clean tanker assessments for US Gulf Coast-North Brazil; US Gulf Coast-UK Continent and US Gulf Coast-Mediterranean. Platts also added details for new petcoke, scrap and grain cargo assessments. This update reflects the discontinuation of six sugar freight assessments, and updates Unit of Measurement references to reflect "mt" in data tables. Platts added further descriptions of cargo sizes to data tables and amended references to US dollars to become Euros in code tables where assessments are published in Euros.

August 2014: Platts updated this guide to include newly launched assessments for clean tankers USGC-Argentina and USGC-Brazil; newly launched assessments for dirty tankers East Coast India-Singapore, Singapore-Chittagong Bangladesh and Singapore-Japan 40kt; Platts also removed references to China fuel oil taxes and fees, and dirty tanker assessments for deliveries to Guangzhou and Shanghai (these China-related assessments were discontinued after December 2013); Platts also removed references to Australia-Jebel Ali and Australia-Lianyungang bauxite freight assessments, which have not been launched, and amended the code reference for Alumina Bunbury/Kwinana-Lianyungang 30kt $/mt Handysize.

June 2014: Platts completed an annual update to the Global Freight Methodology Guide in June 2014. In this update, Platts reviewed all content. In this edition, Platts consolidated all dry bulk freight assessment methodology into this document, and added certain freight-related guidance to sections covering MOC Data Publishing Principles. As part of this consolidation, Platts moved definitions for tanker routes to Part VII. Platts made minor edits throughout.

November 2013: Platts updated this guide, making minor edits through the text, and noting that World Scale-related assessments are published to within a quarter of a point. In this update, Platts added definitions for its Intermediate and Handy-size/MR assessments, added a table noting the sizes of its fuel oil-only assessed routes, clarified typical usage of prompt replacement vessel data, and noted costs typically included in lump-sum fixtures. Platts also added new assessments: clean 30kt tankers Baltic-UKC, clean 60kt tankers UKC-West Coast Africa, dirty 140kt tankers Black Sea-Med, dirty 270kt tankers Caribbean-China, dirty 270kt tankers Caribbean-Singapore, and dirty 270kt tankers Caribbean-West Coast India. Platts also removed a reference to a discontinued assessment, dirty 70kt tankers LatAm-USAC.

August 2013: Platts revamped all Oil Methodology And Specifications Guides, including its Freight guide, in August 2013. This revamp was completed to enhance the clarity and usefulness of all guides, and to introduce greater consistency of layout and structure across all published methodology guides. Methodologies for market coverage were not changed through this revamp, unless specifically noted in the methodology guide itself.
