Next Destination

The Next Destination API returns the next known destination of a vessel together with the estimated time of arrival (ETA), the remaining sailing distance, and the projected route from the vessel's latest known position to that destination. The destination may originate either from the AIS-reported destination transmitted by the vessel or from schedule-based information derived from vessel schedules. In addition to the destination itself, the endpoint provides a calculated sailing route and an ETA estimate based on the vessel's current position and the destination port. Rate limit is 300 requests per minute.

Download Specification

/v2/maritime/next-destination

JSON

Returns a vessel's next known destination with the ETA, remaining sailing distance, and projected route from the vessel's latest position, based on either AIS-reported or

Request

GET /v2/maritime/next-destination

Query Parameter

vesselUid string[] optional

MarineTraffic vessel unique identifiers. Multiple values allowed (comma-separated).

imo string[] optional

IMO numbers of the vessels. Multiple values allowed (comma-separated).

mmsi string[] optional

MMSI numbers. Multiple values allowed (comma-separated).

updatedSince string optional

Return only records updated after the specified timestamp. Accepts ISO-8601 timestamp (YYYY-MM-DDThh:mm:ssZ) or YYYY-MM-DD (interpreted as 00:00:00Z).

Response

200 application/json array

vesselUid integer

MarineTraffic vessel unique identifier.

imo integer

Vessel IMO number.

mmsi integer

Vessel MMSI number.

vesselName string

Vessel name.

destinationId integer

MarineTraffic destination zone identifier.

Coverage

`destinationUnlocode` string

Destination zone UN/LOCODE.

`destinationCountry` string

Destination zone country code.

`route` string

Projected route geometry to the destination (WKT LINESTRING).

`distance` integer

Remaining sailing distance to the destination (in nautical miles).

`distanceEca` integer

Remaining distance within Emission Control Areas (in nautical miles).

`distanceHra` integer

Remaining distance within High Risk Areas (in nautical miles).

`canalCrossing` string[]

List of canal names expected to be crossed along the vessel's projected route.

`eta` string

Kpler-estimated time of arrival at the destination (UTC / ISO-8601). This value is calculated by Kpler and may differ from the ETA reported by the vessel via AIS.

`source` string

Destination data source (ais or schedule)

`updatedAt` string

Record last updated timestamp (UTC / ISO-8601).
